

Paxton Thompson

High Performance Assessment

2025-12-16 (Age: 26)
Previous Test: 2025-11-11

Expected Velo

86 mph (58th)

Body Weight

200 lbs

Height

6'1"

Maximal Strength

Relative Strength

Elastic Power

Relative Power

Concentric Power

Upper Body Strength

Reactive Strength

53 OVR
+6.6

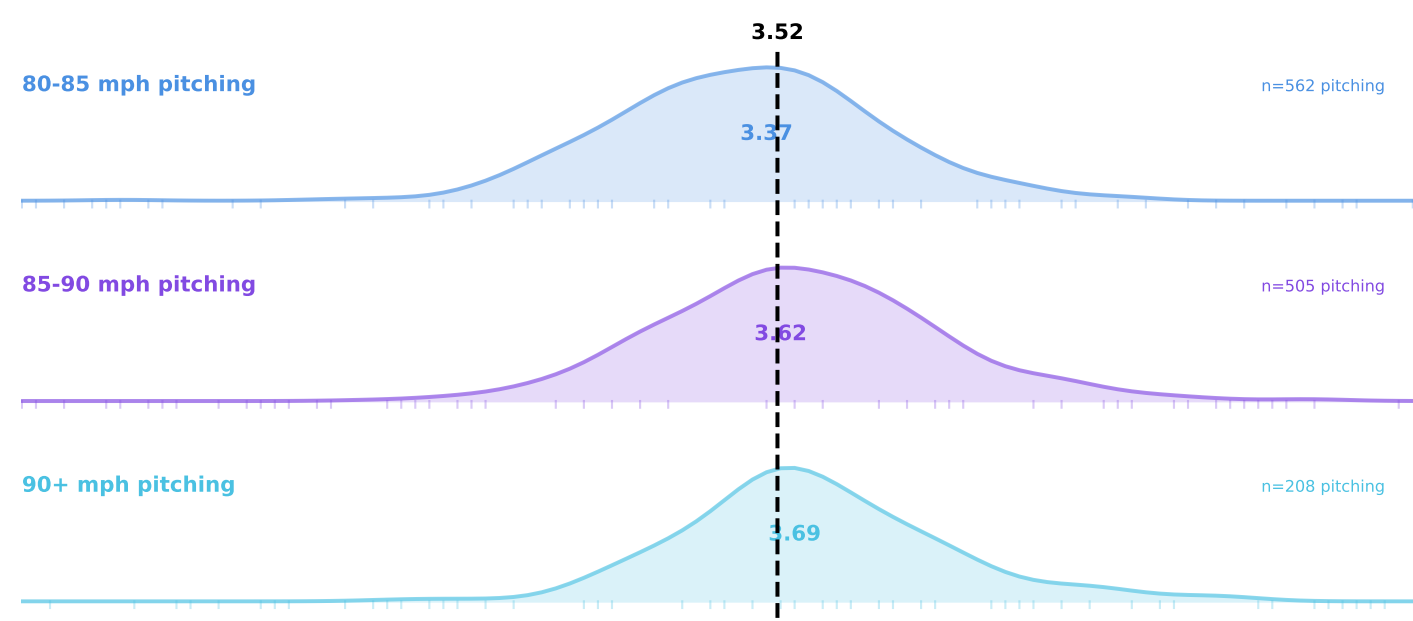

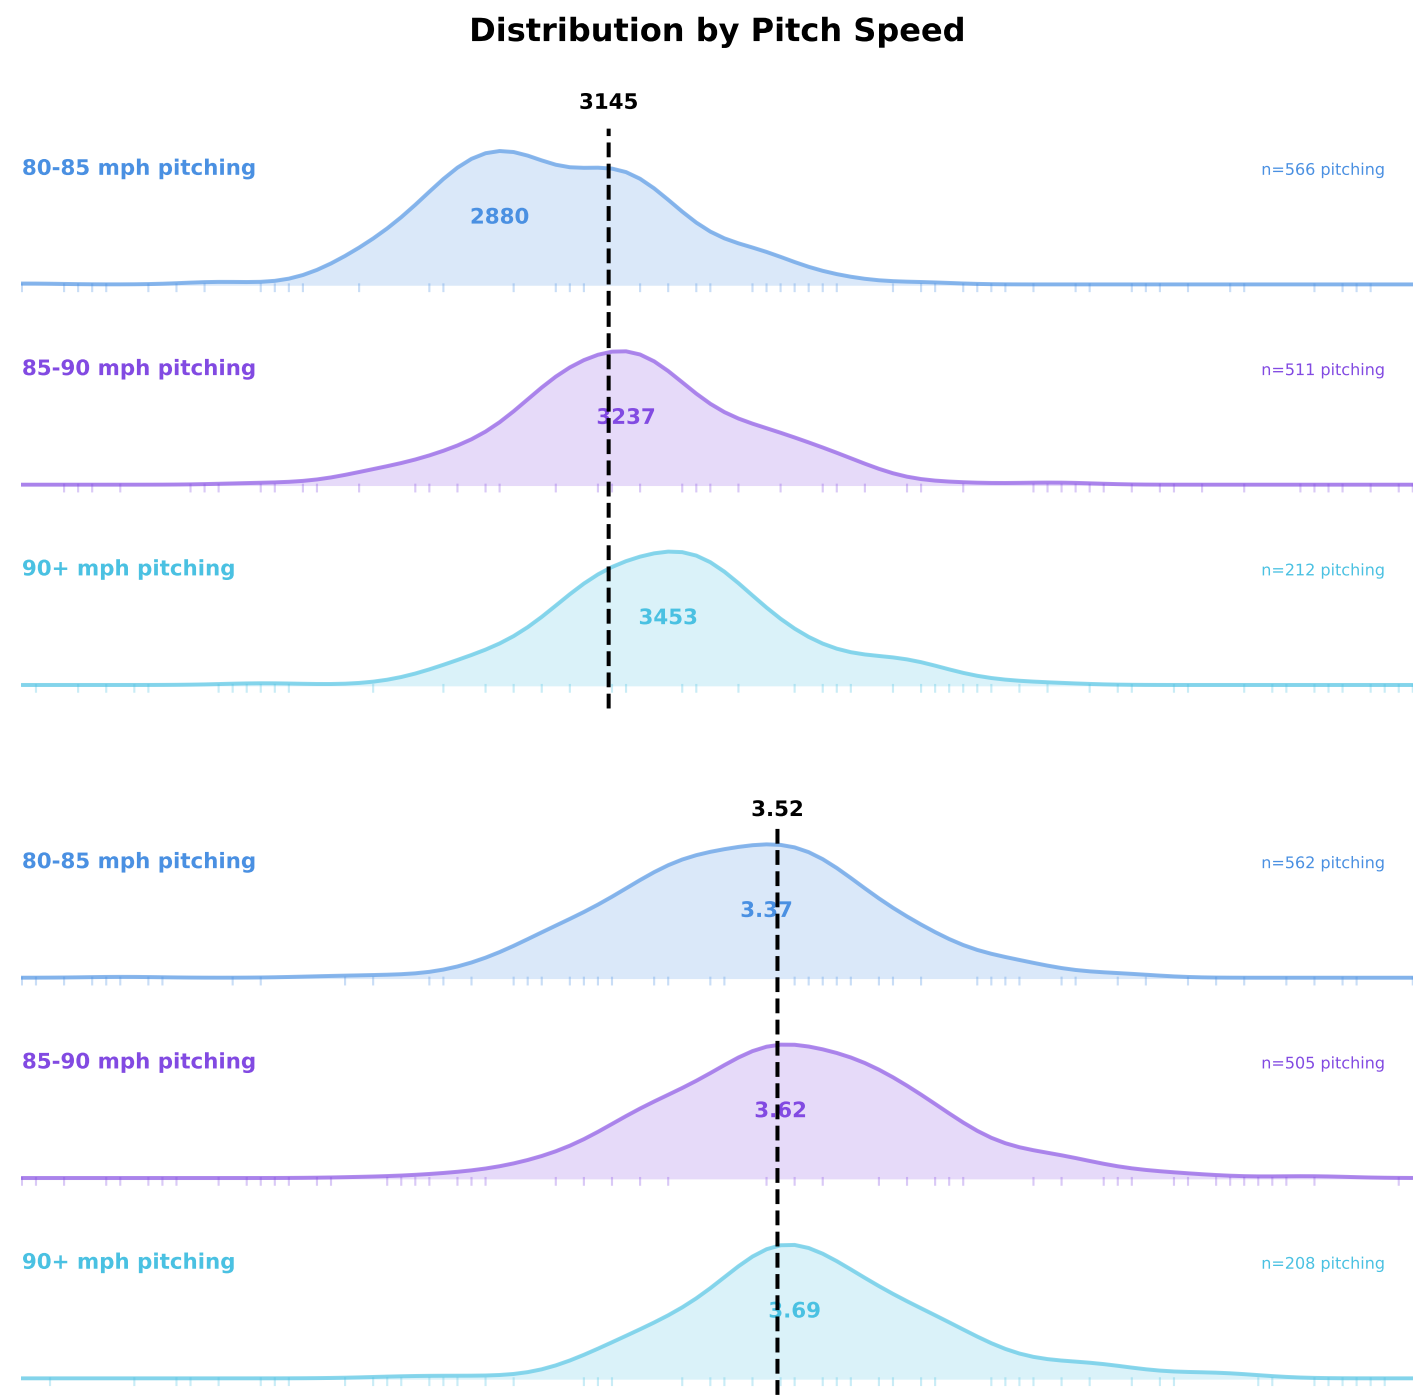

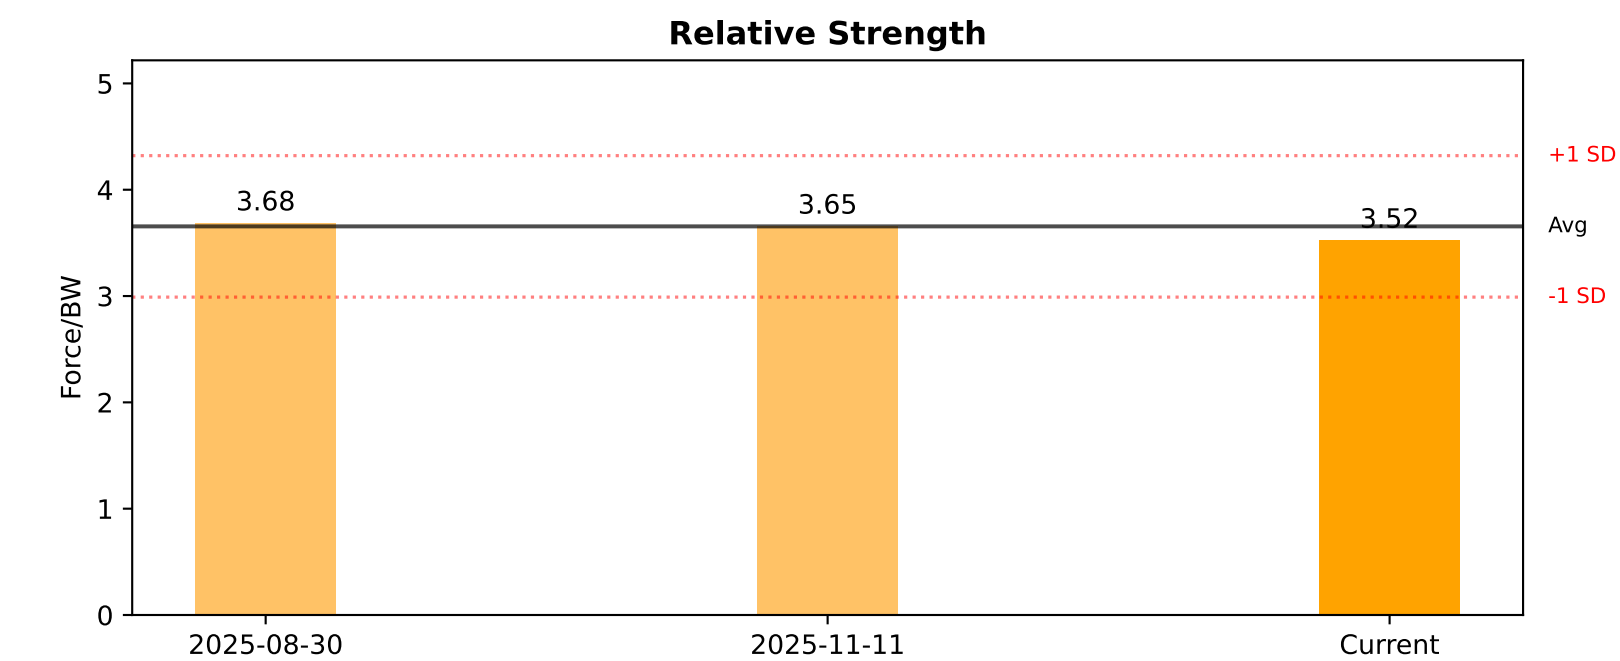

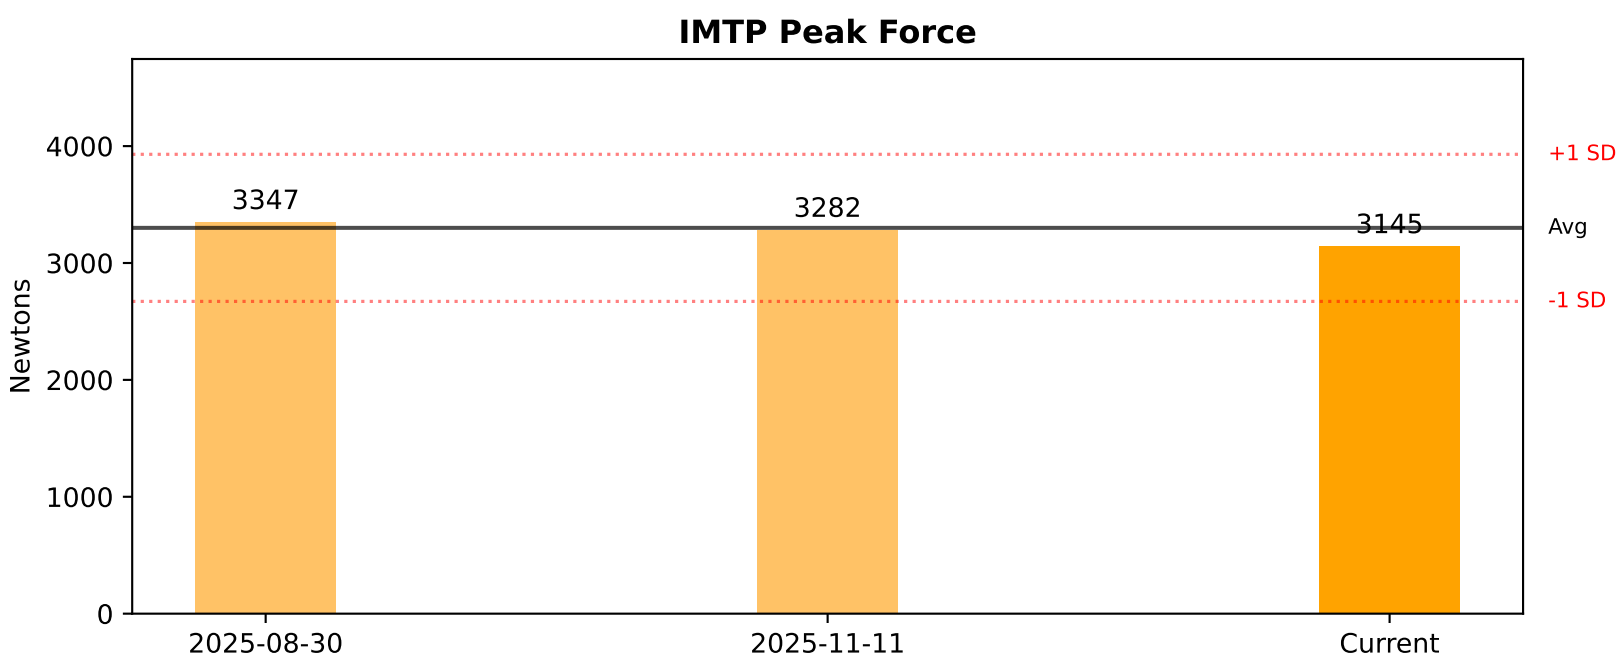

Previous Test (2025-11-11)

Strength - 42

Only Maximal Strength score available

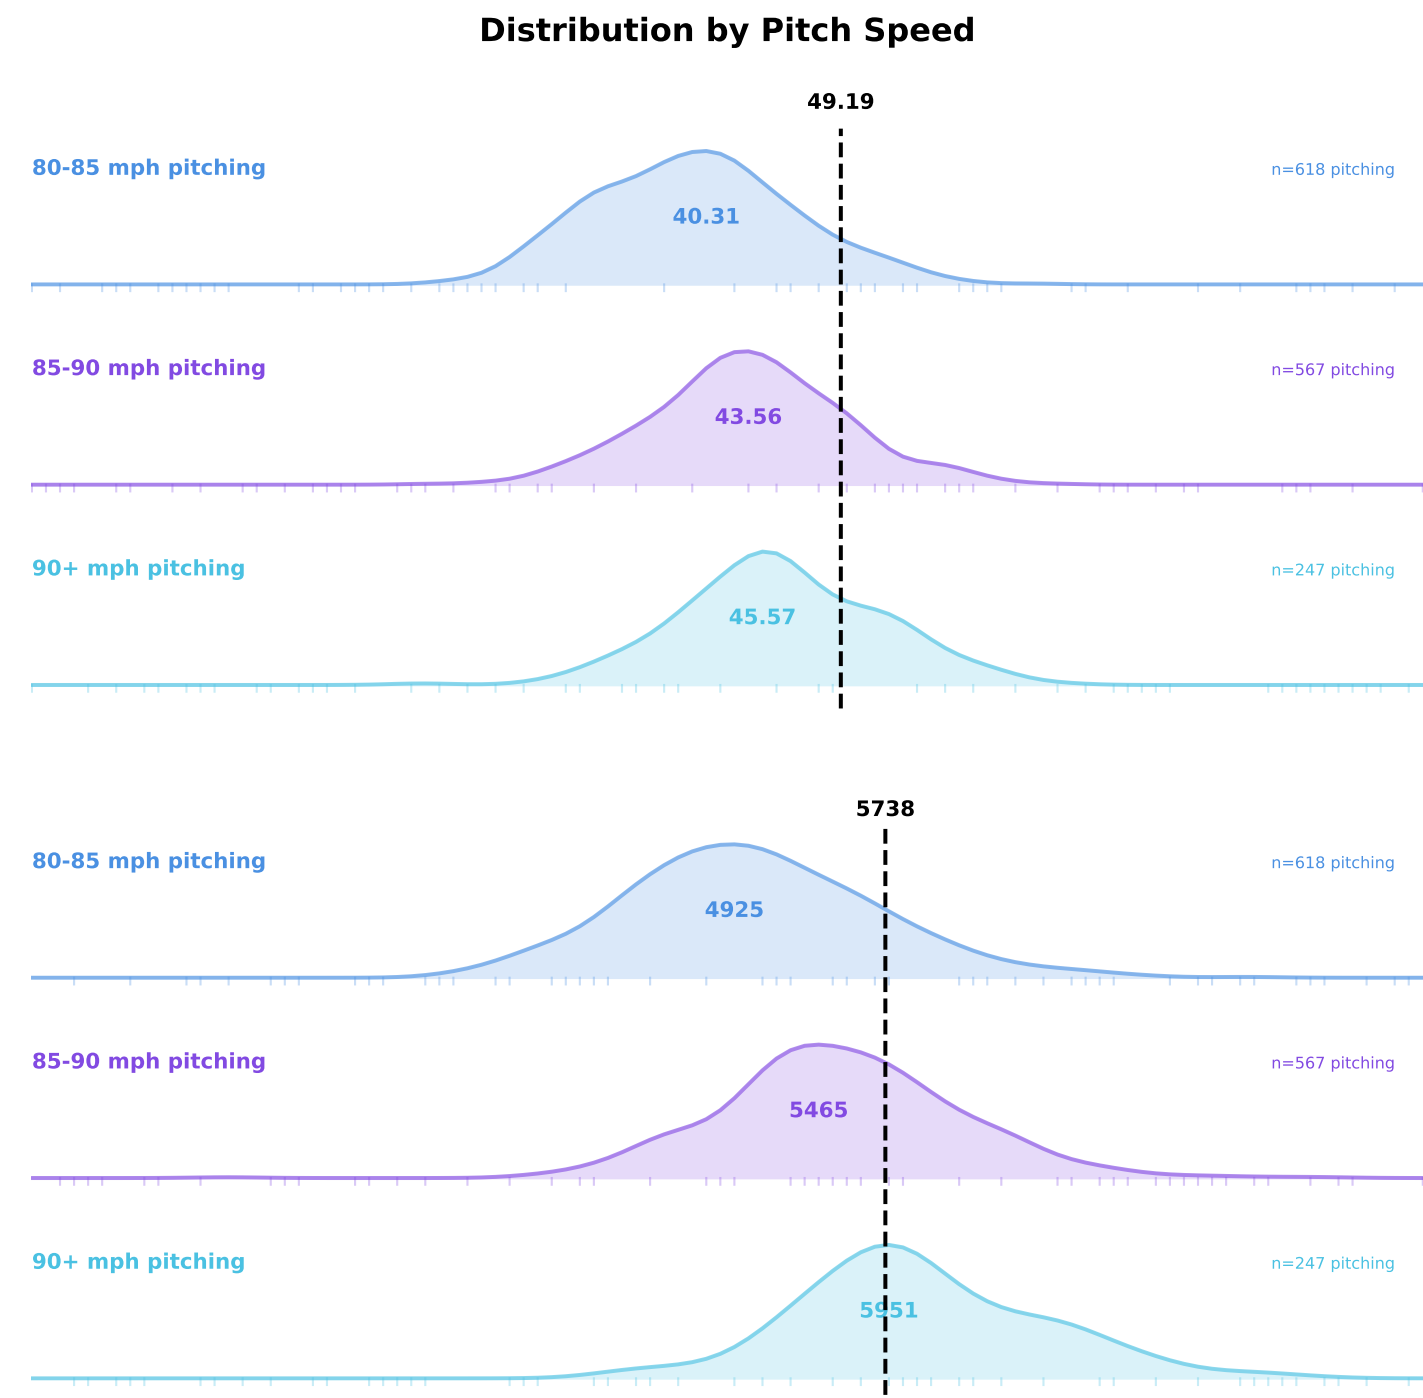

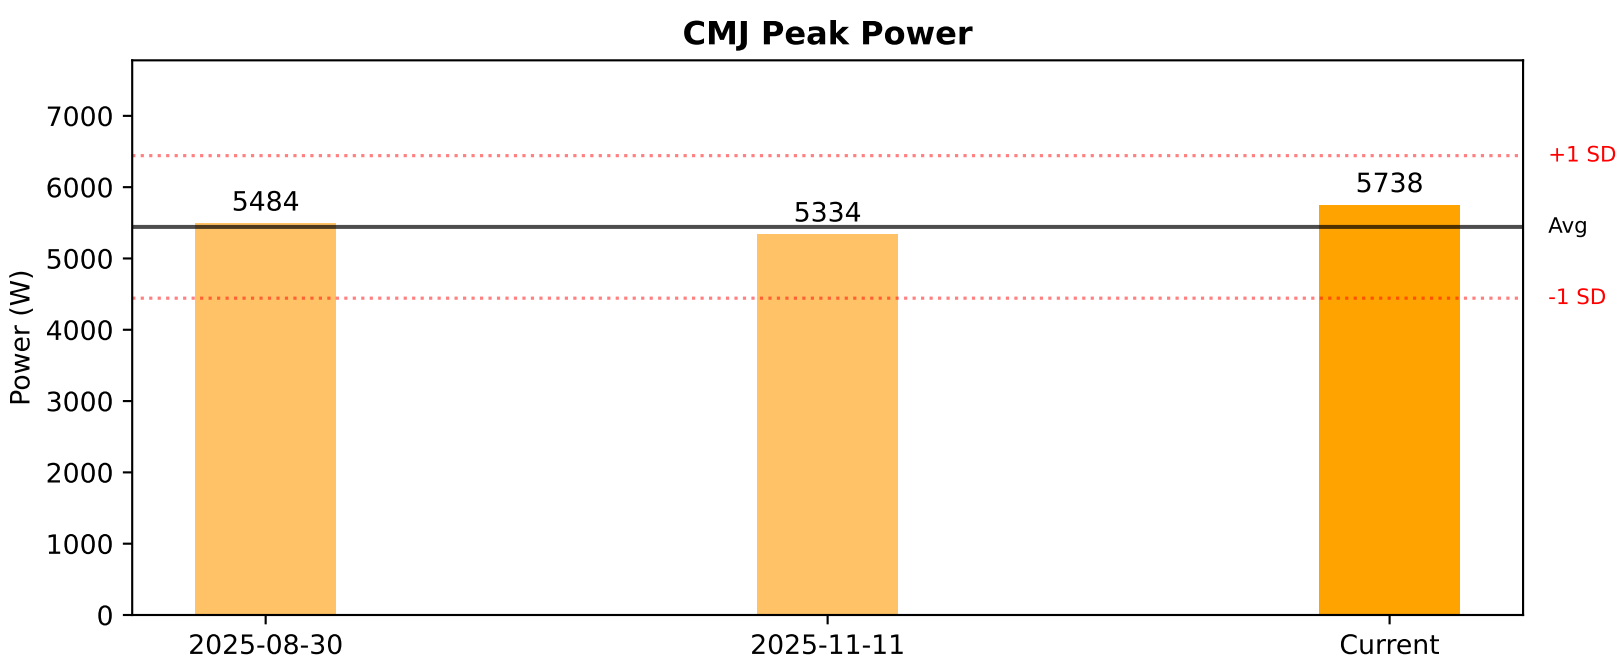

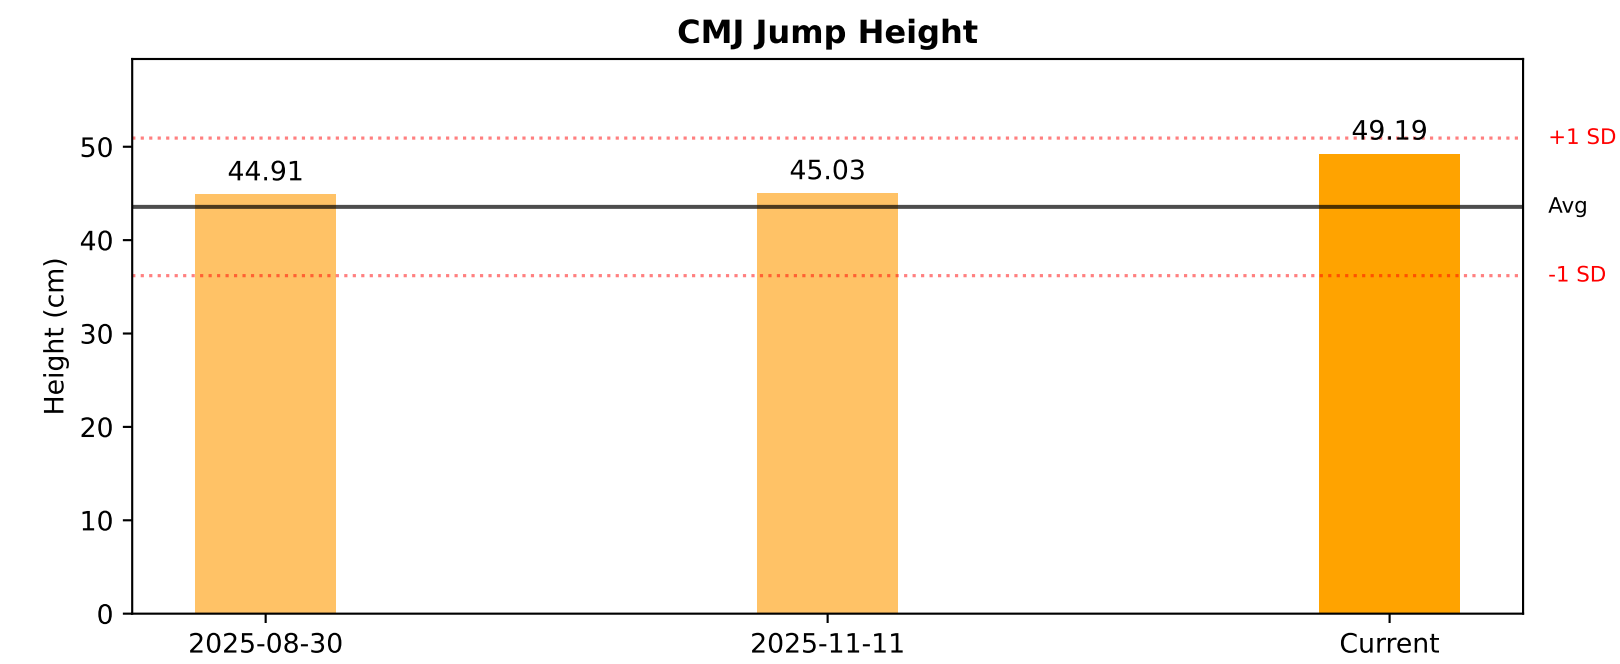

Maximal Strength: Peak force production capability measured by IMTP

Relative Strength: Force production relative to body weight

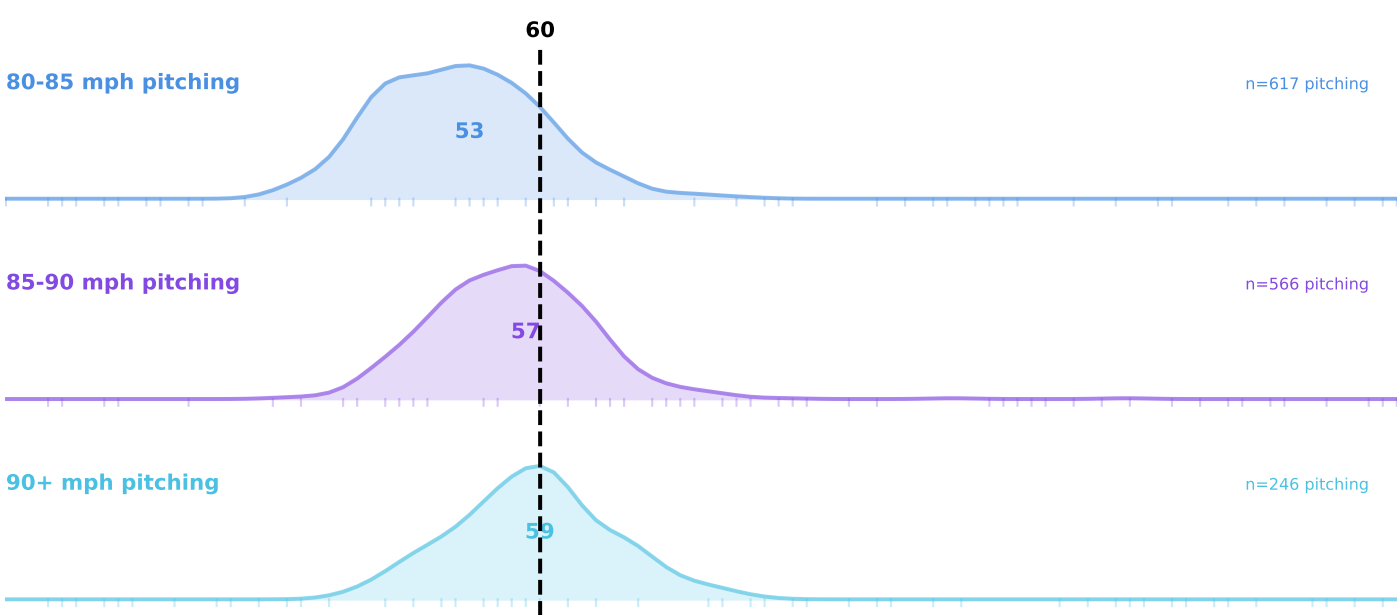

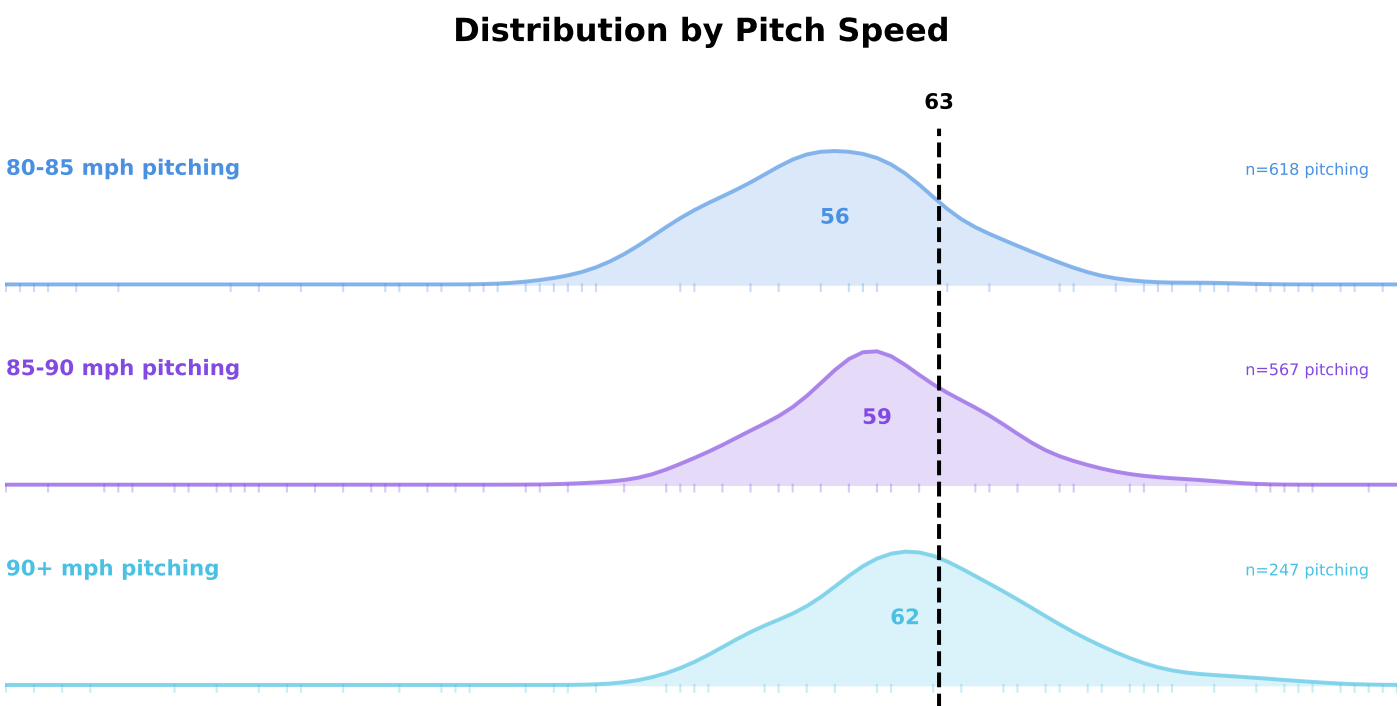

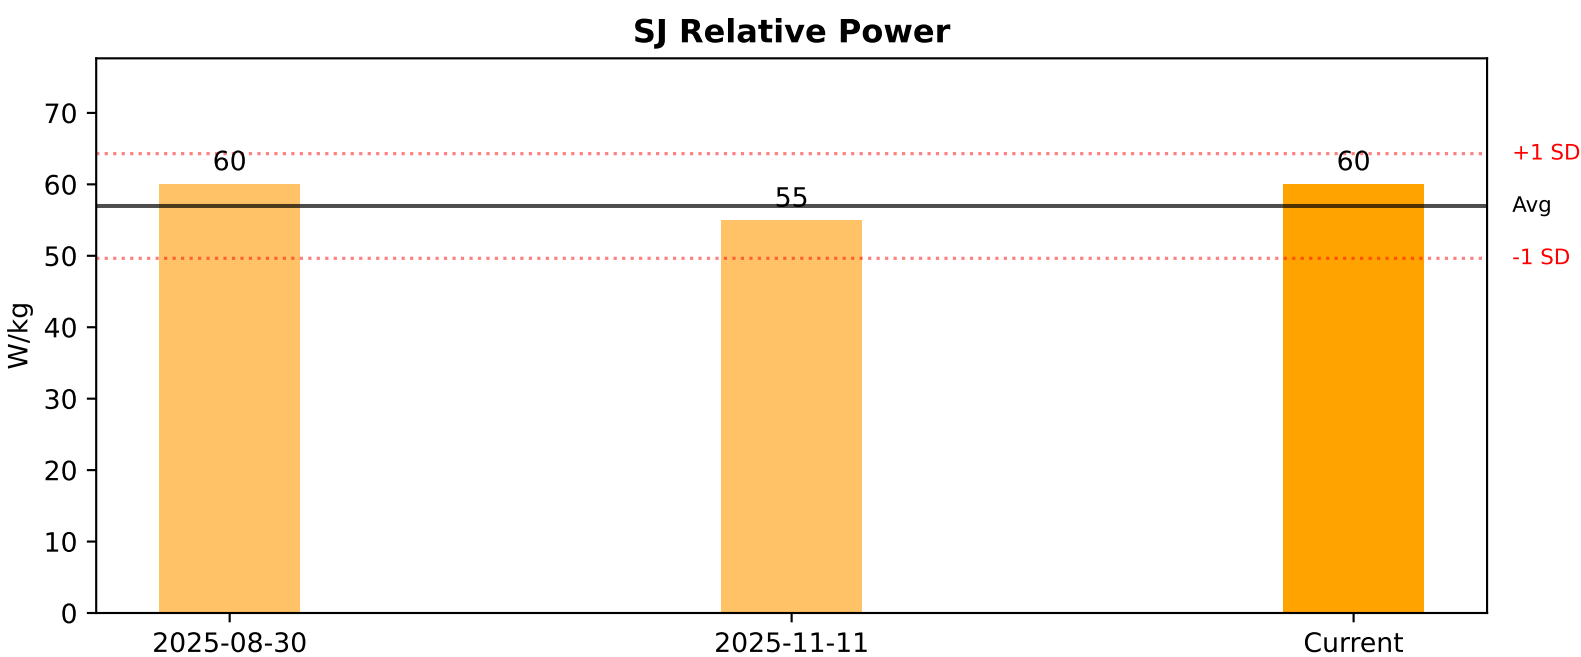

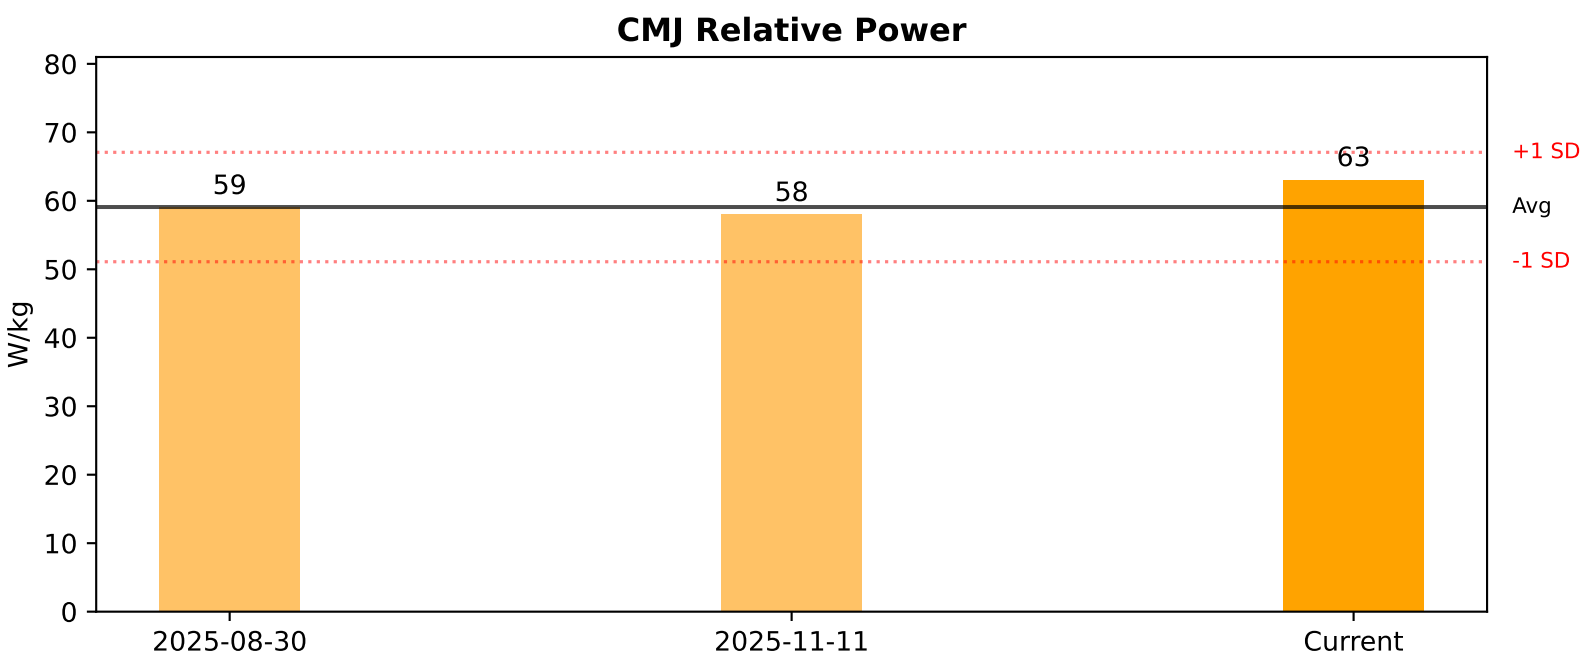

Elastic Power - 63

Power output using stretch-shortening cycle (countermovement jump)

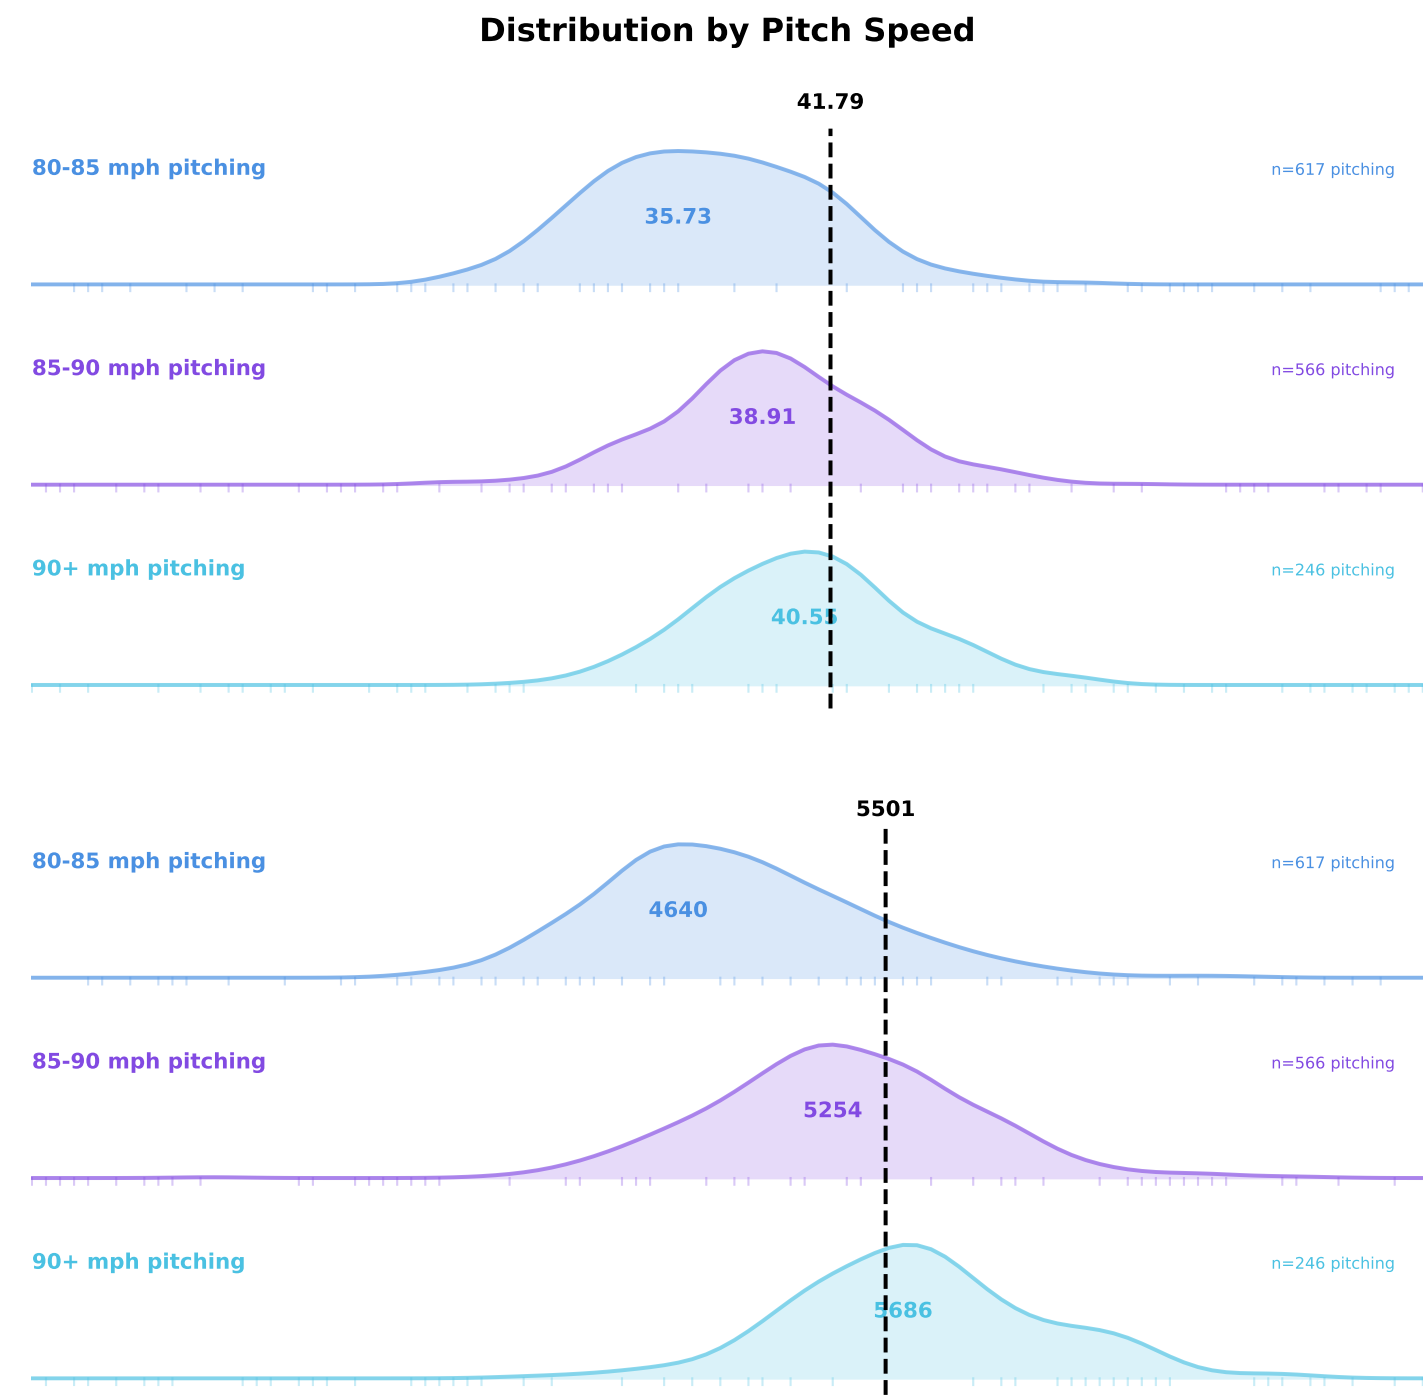

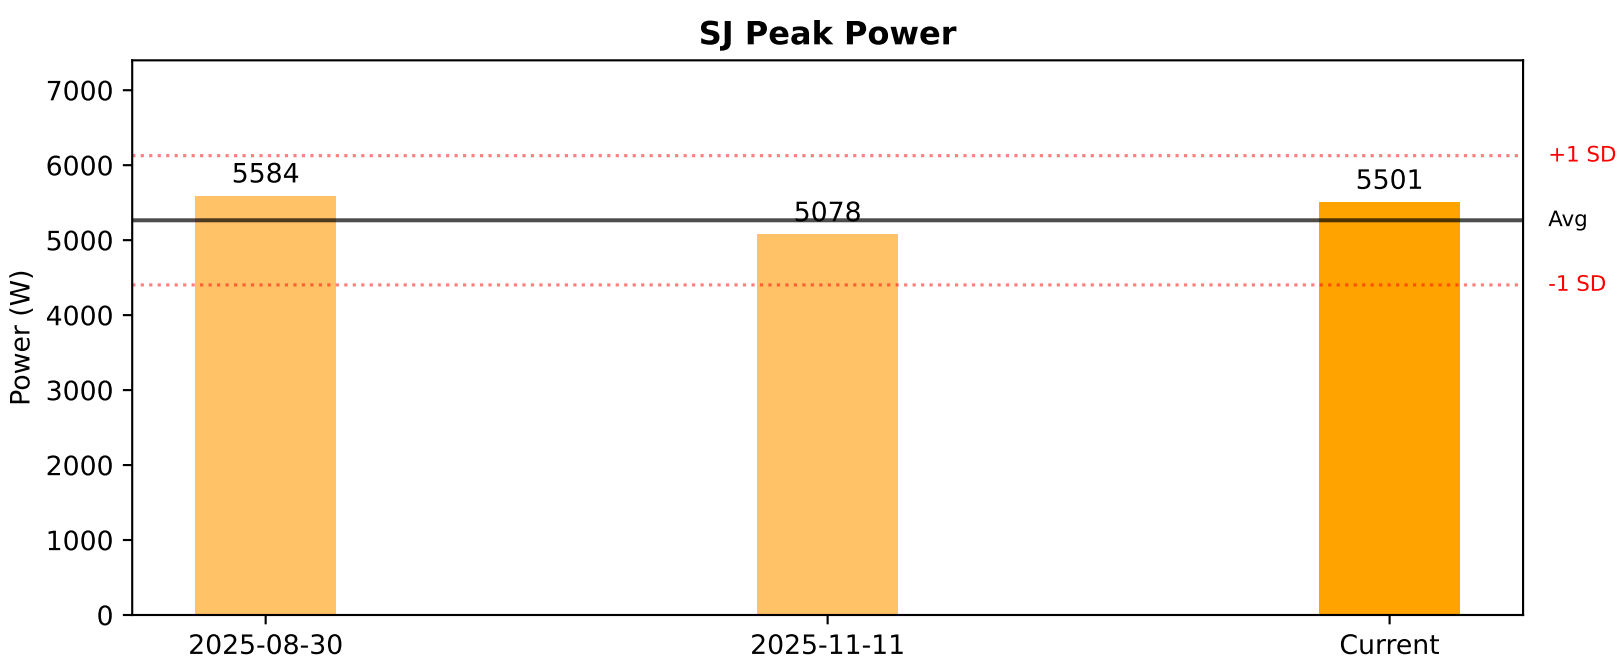

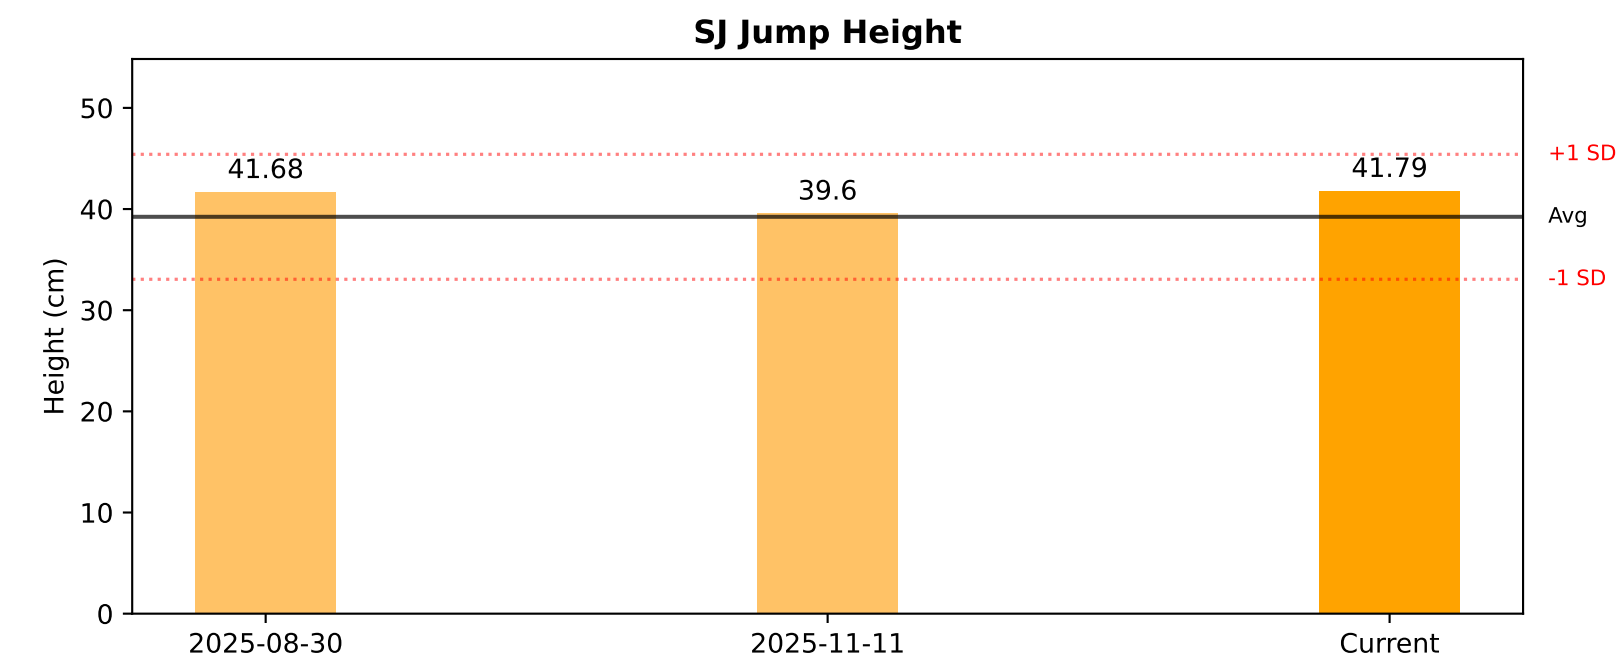

Relative Power - 71

Power output relative to body weight - indicates power efficiency

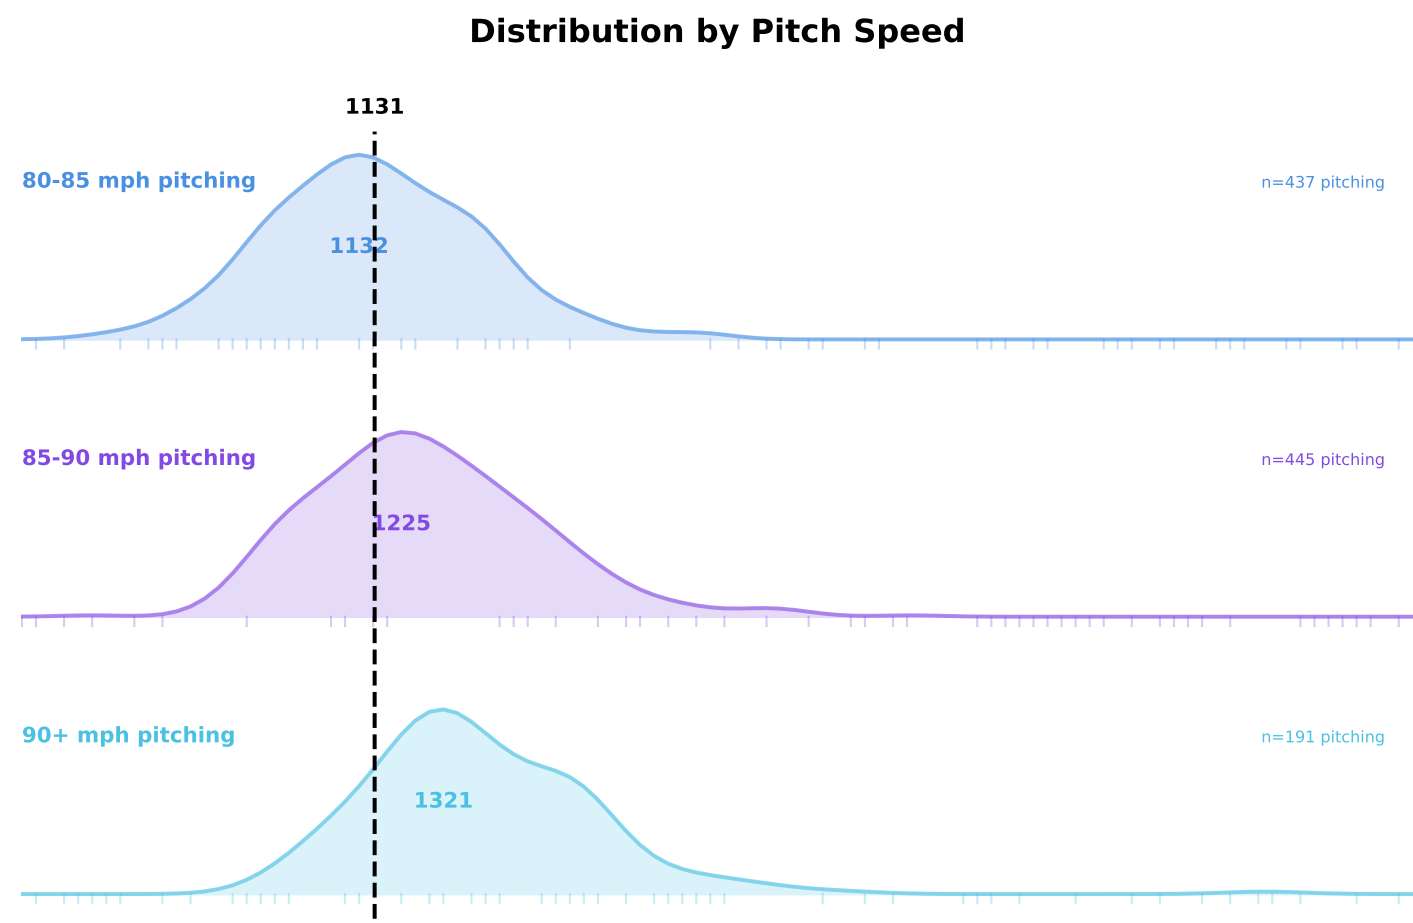

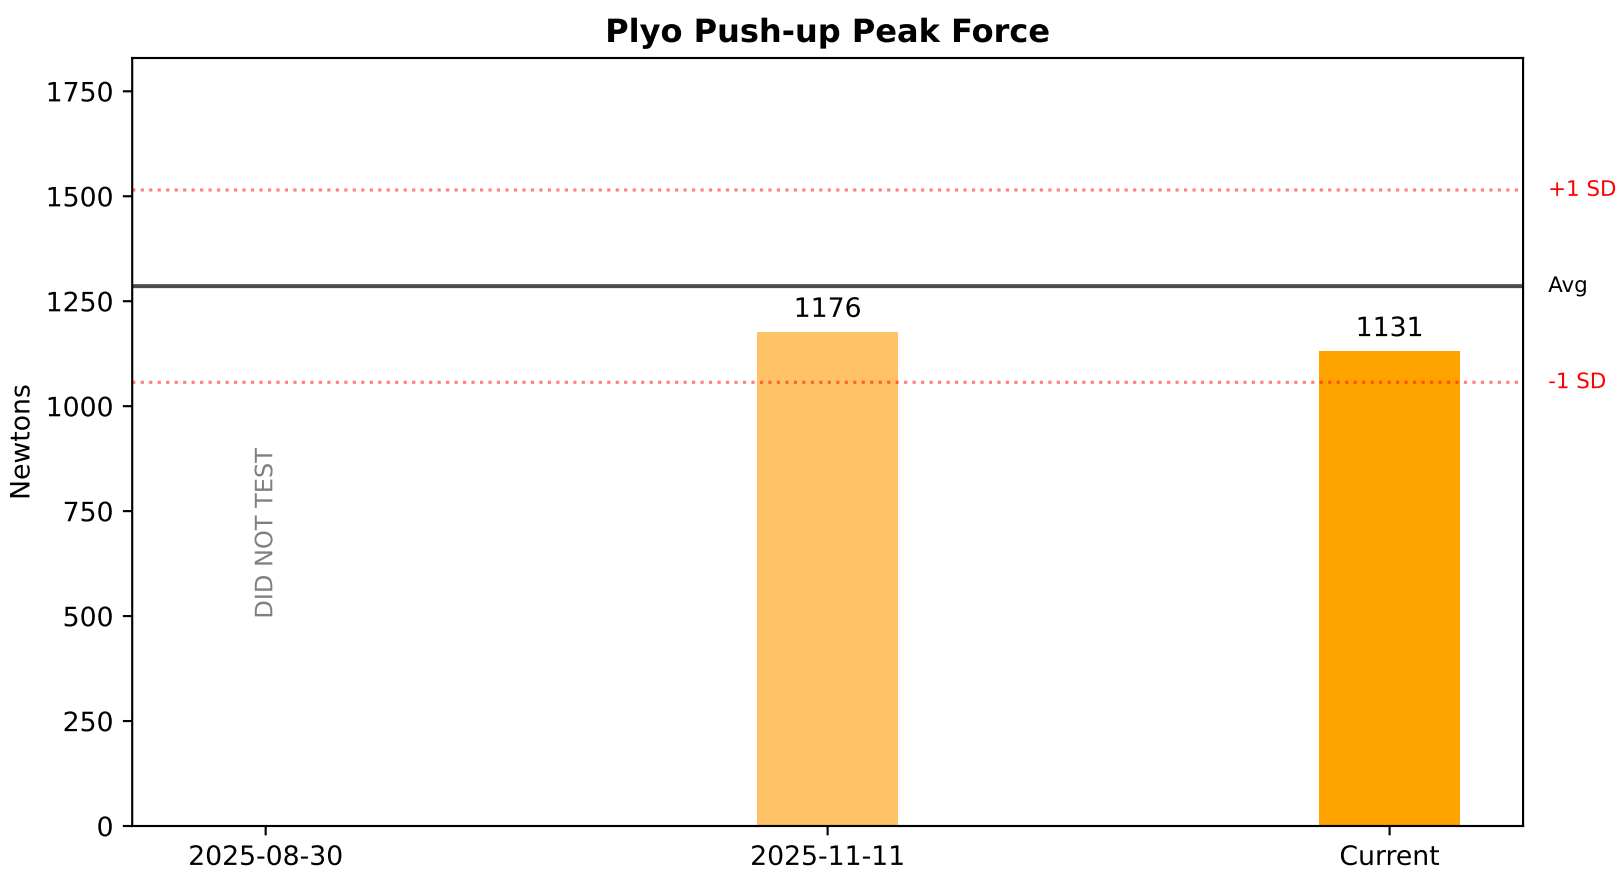

Concentric Power - 62

Pure concentric power without countermovement (squat jump from static position)

Upper Body Strength - 25

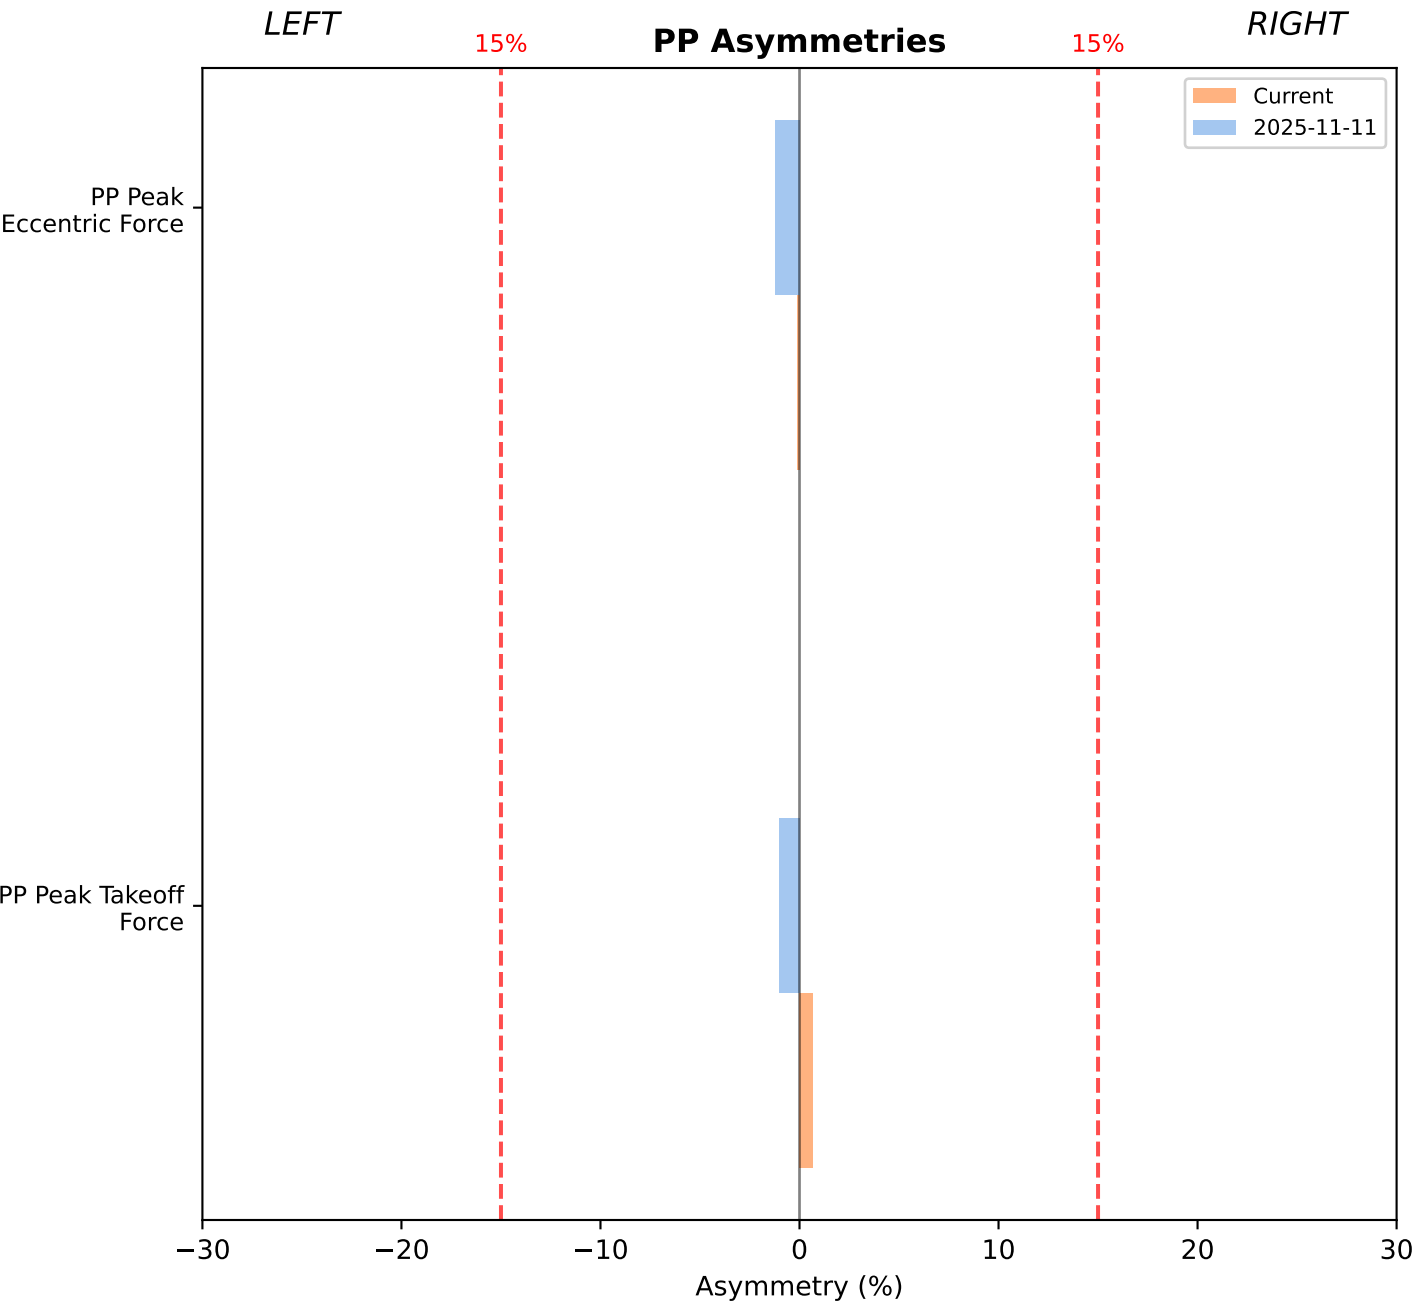

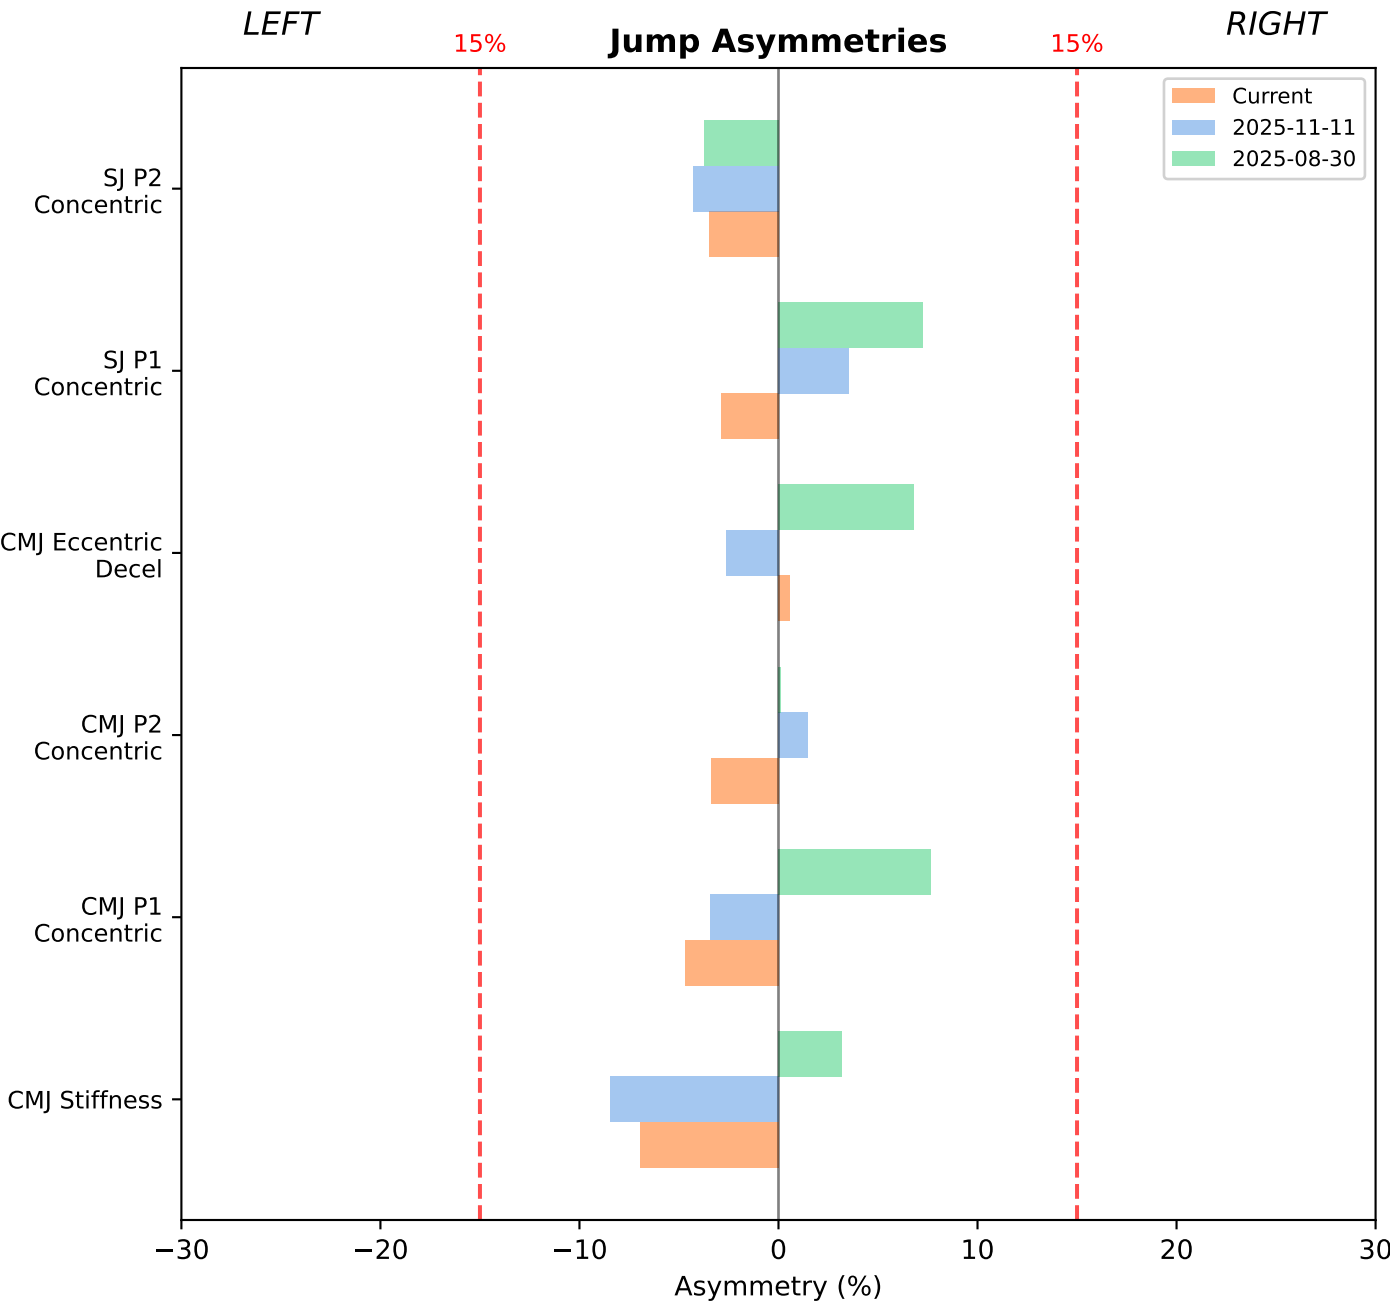

Upper body explosive strength measured during plyometric push-up test

Movement Asymmetries

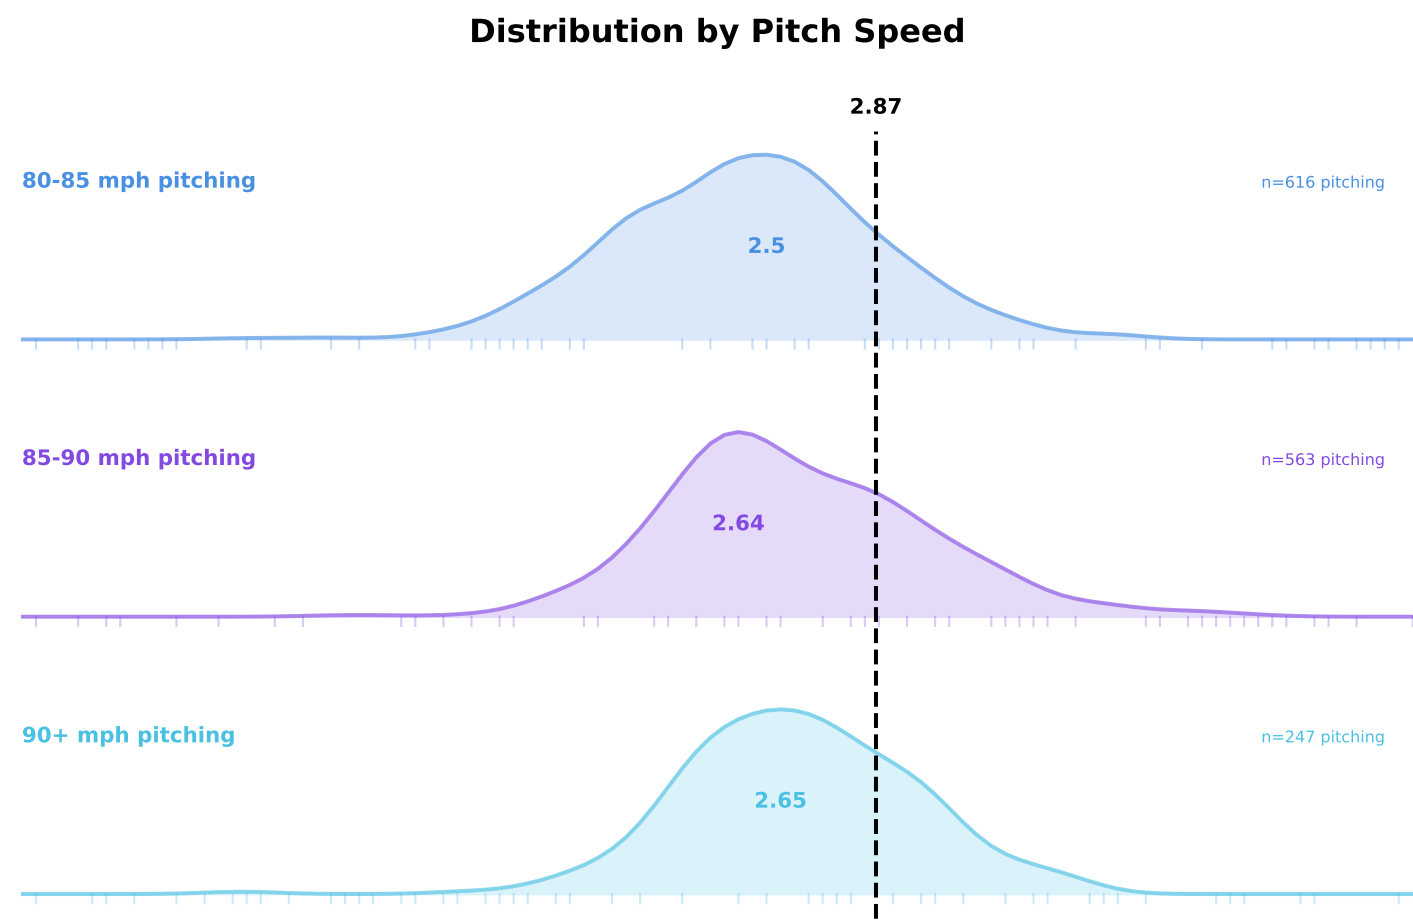

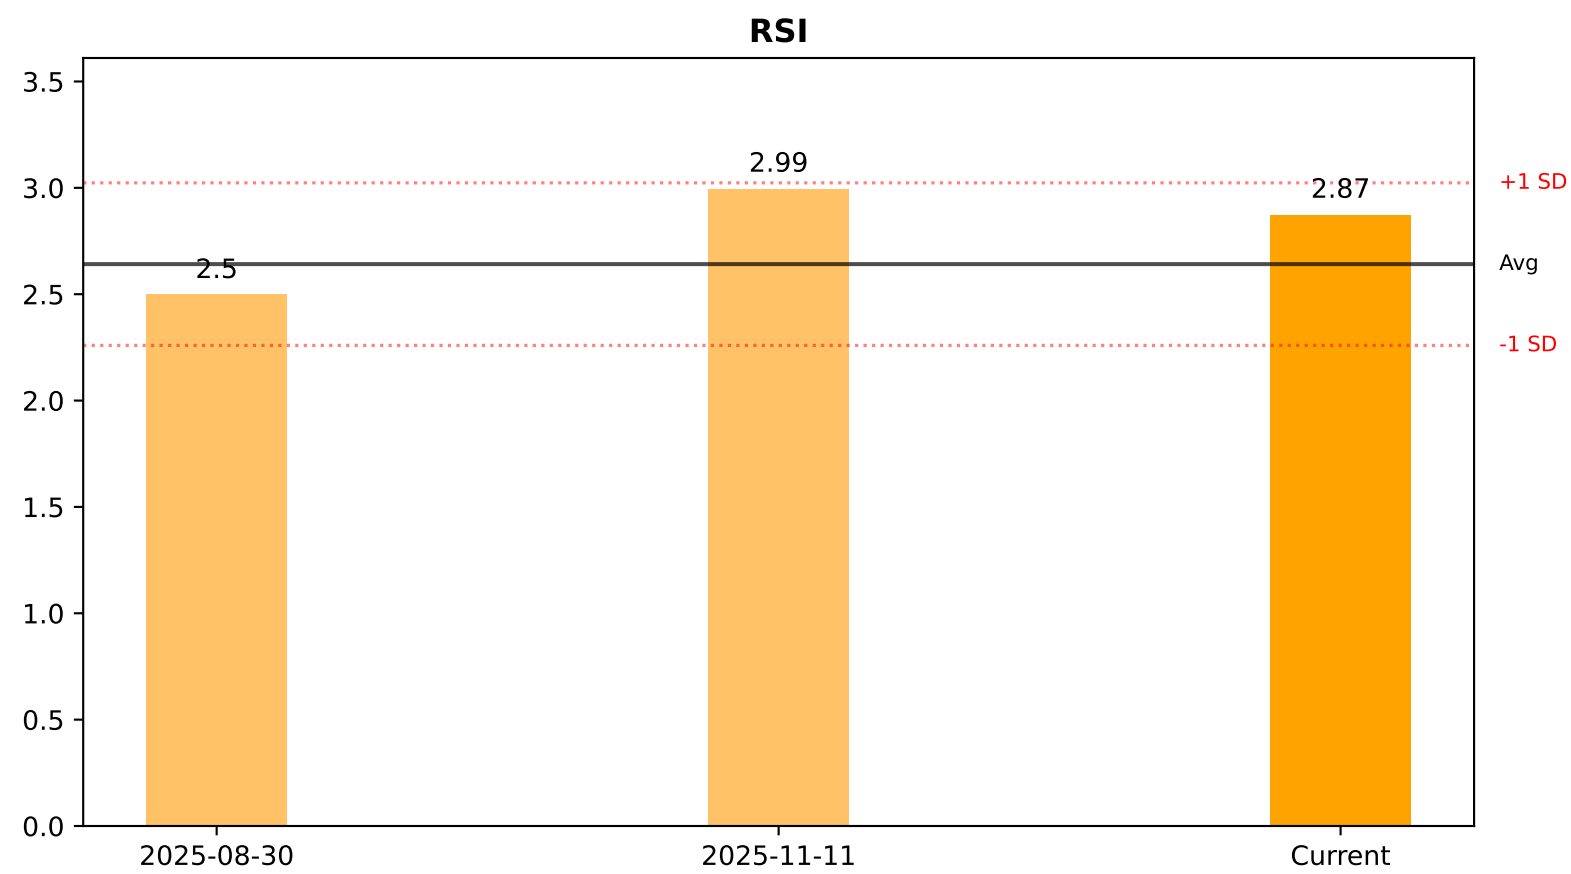

Side-to-side differences in jump performance - values beyond $\pm 15\%$ suggest asymmetry requiring attention

Asymmetries show if you're favoring one side during movement. Values beyond $\pm 15\%$ (dashed lines) may indicate a need for unilateral training to reduce imbalances.

Reactive Strength - 74

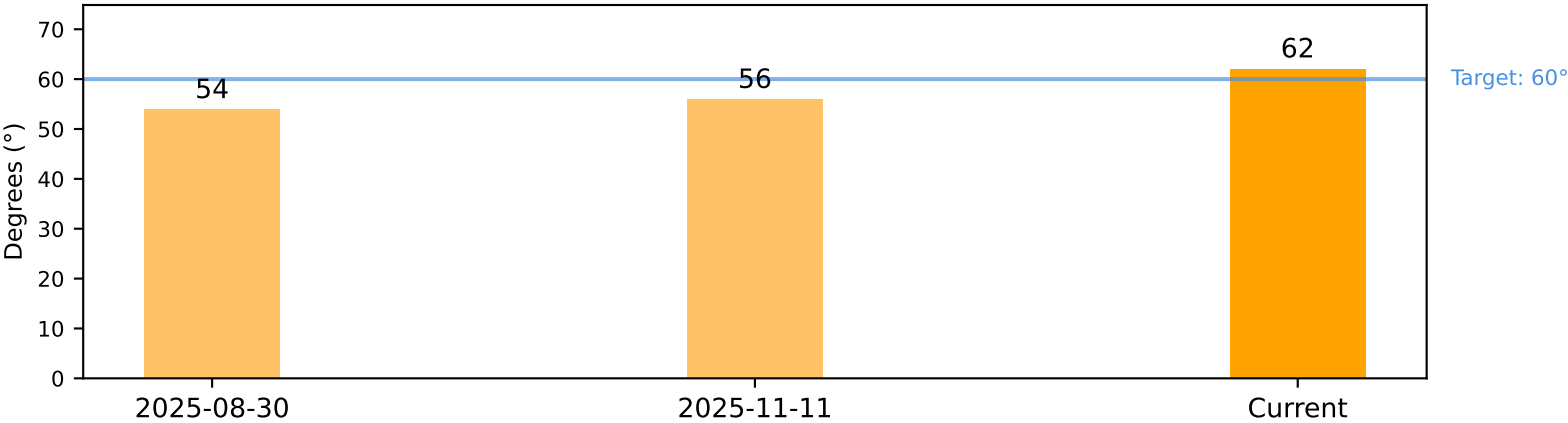

Reactive Strength Index - ability to rapidly transition from eccentric to concentric action

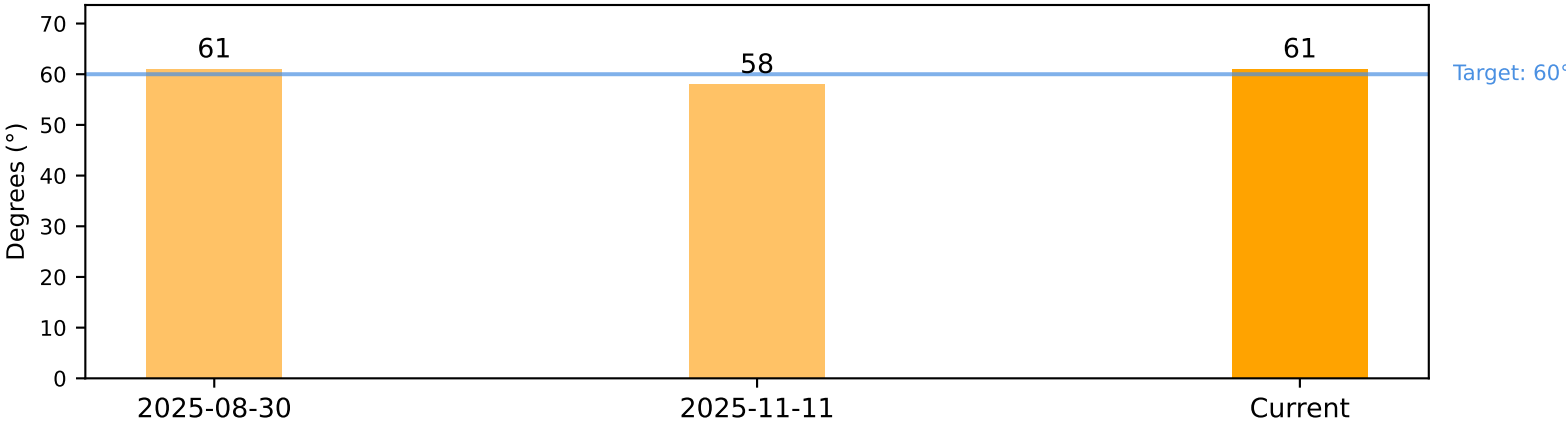

ROM - Range of Motion Assessment

Flexibility and mobility assessment across key joints - higher values indicate greater range of motion

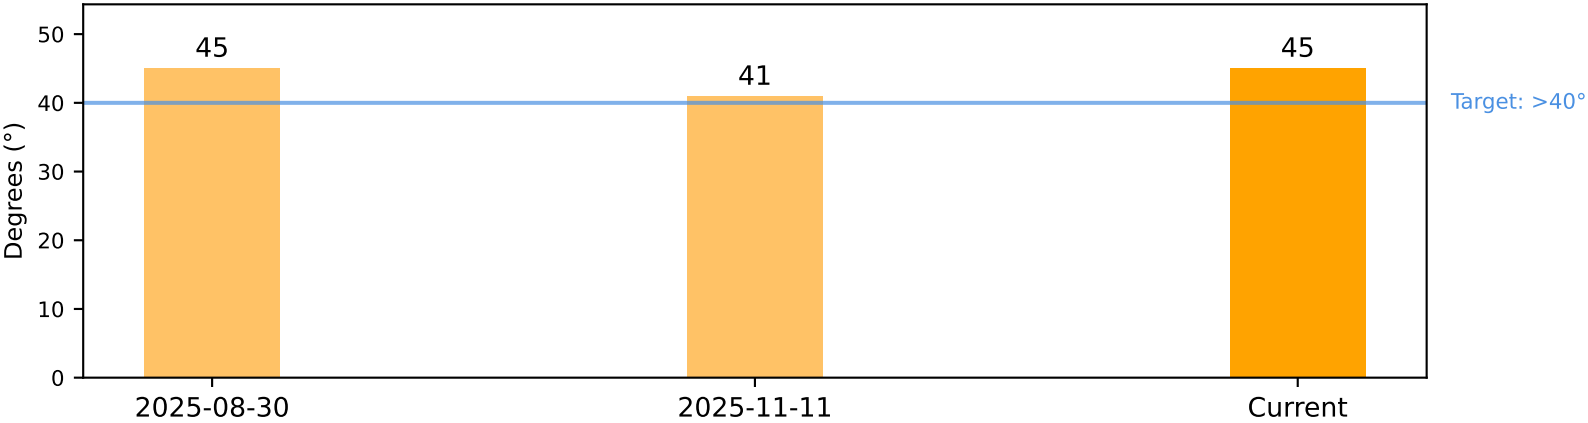

T-Spine ROM Left

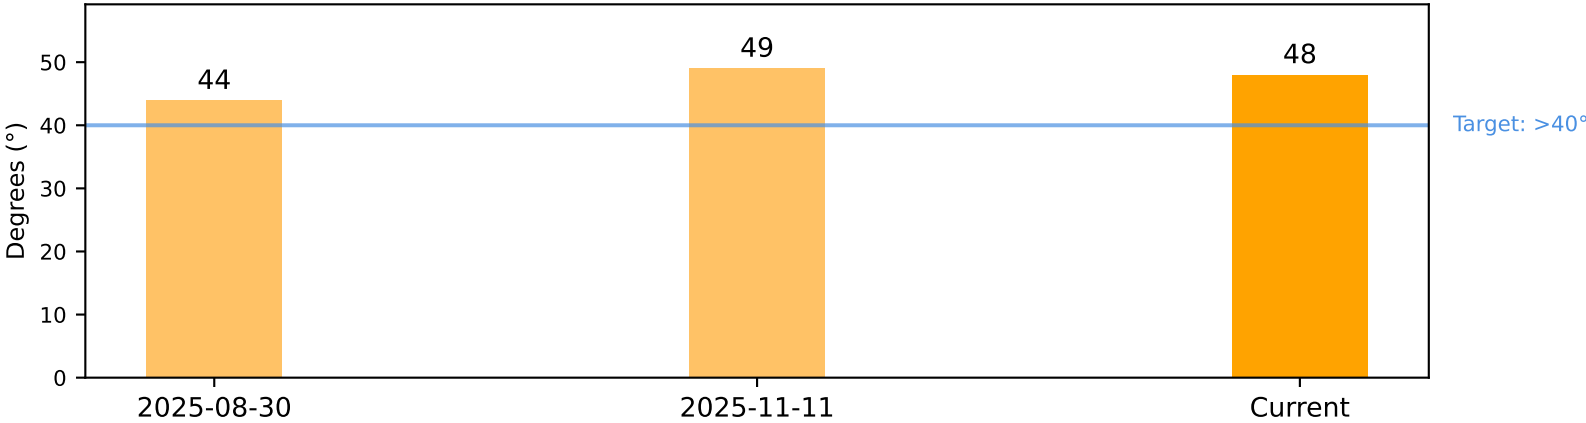

T-Spine ROM Right

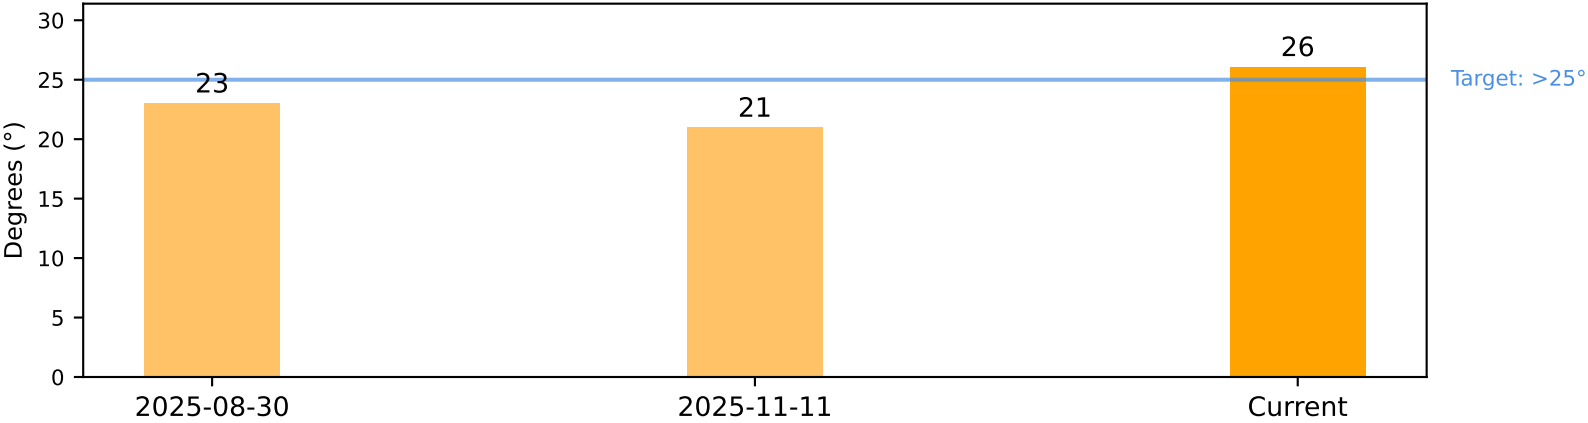

Hip ER Left

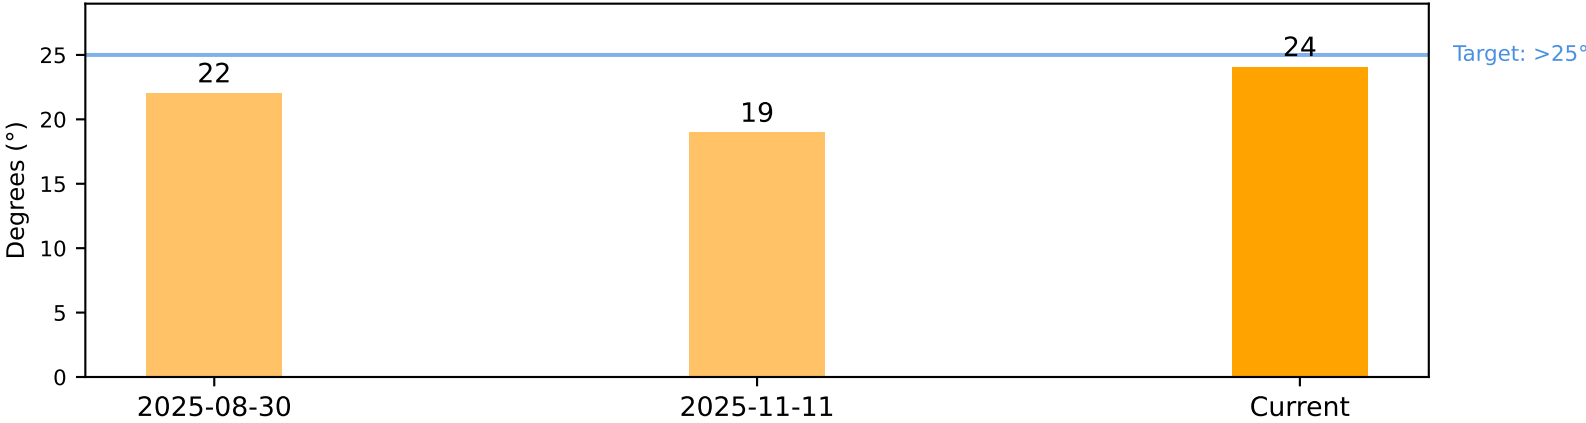

Hip ER Right

Hip IR Left

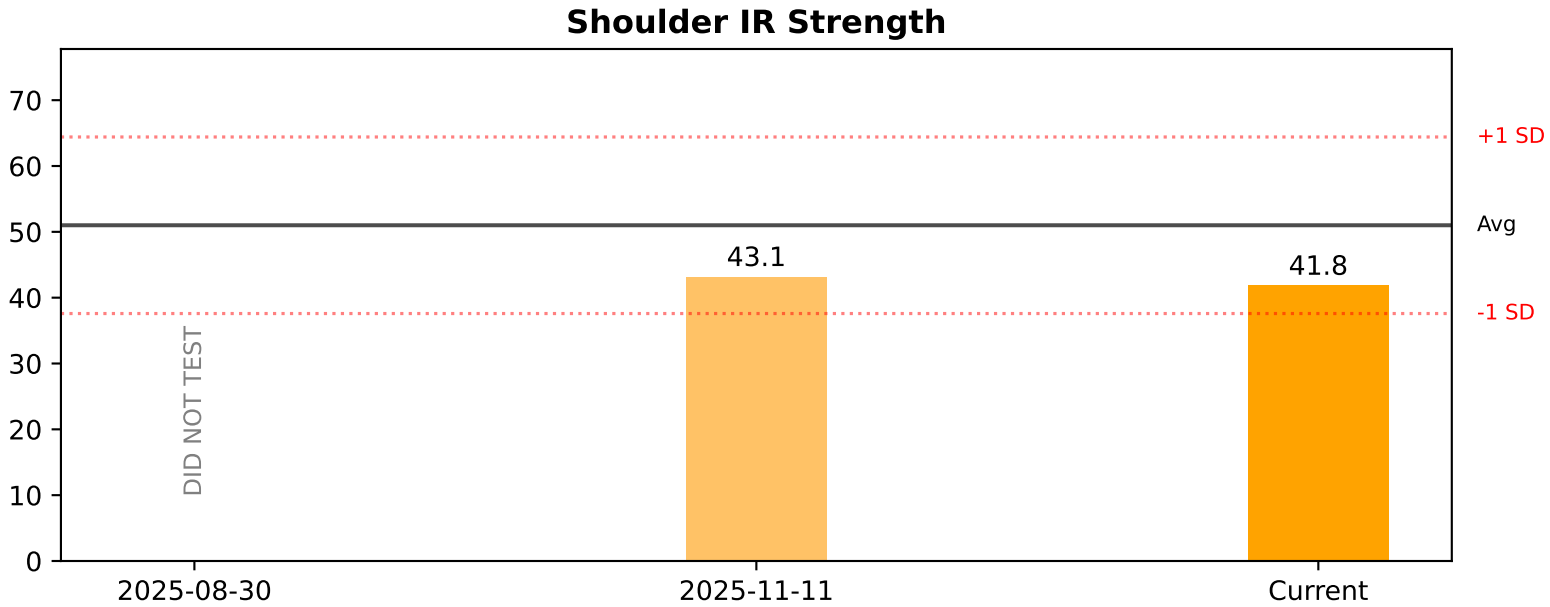

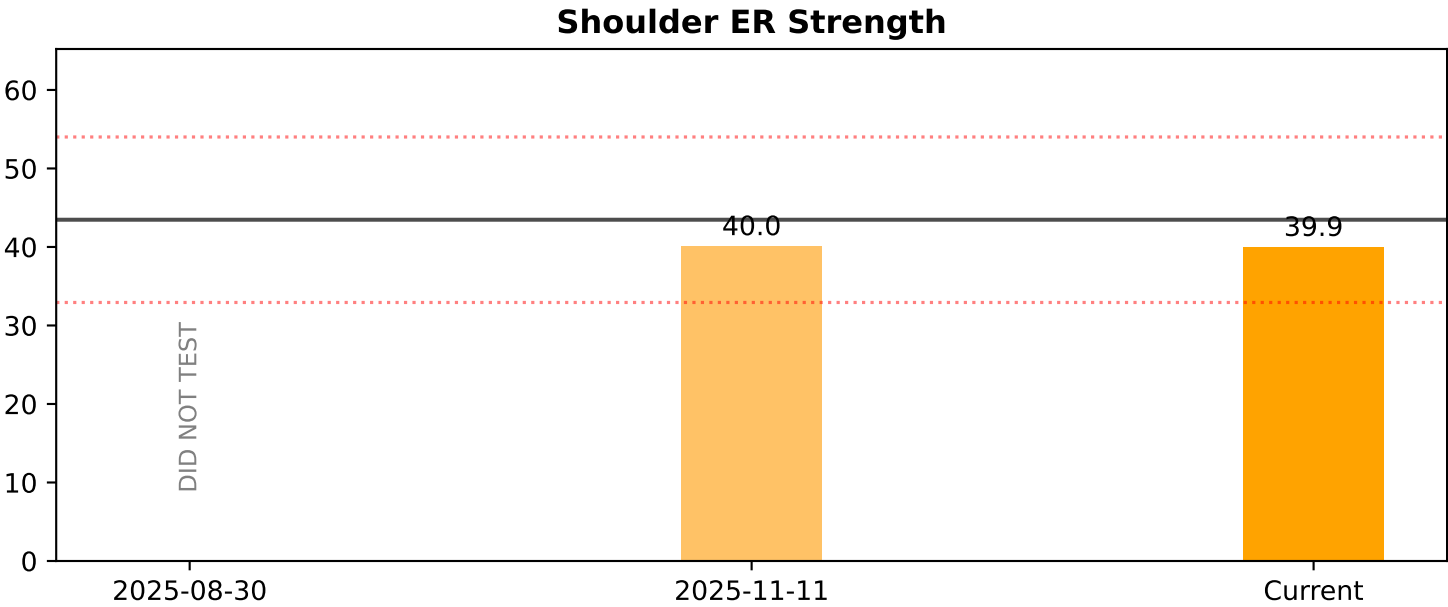

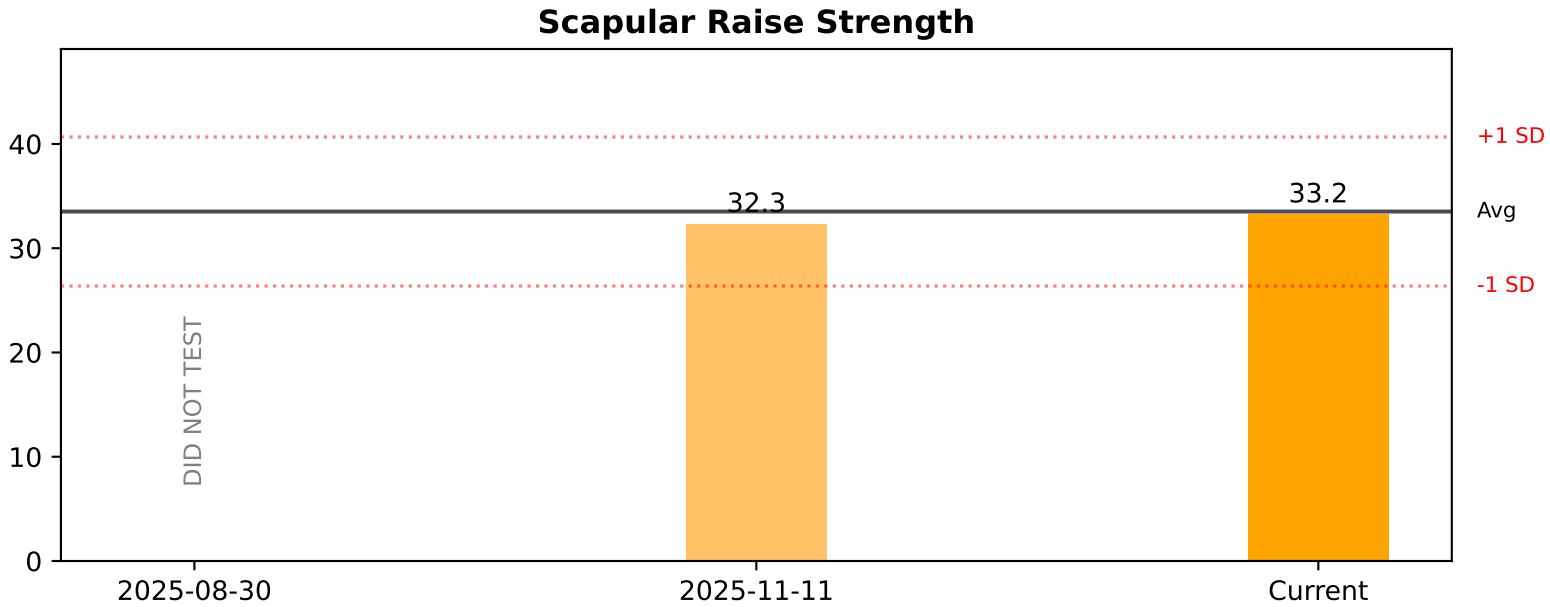

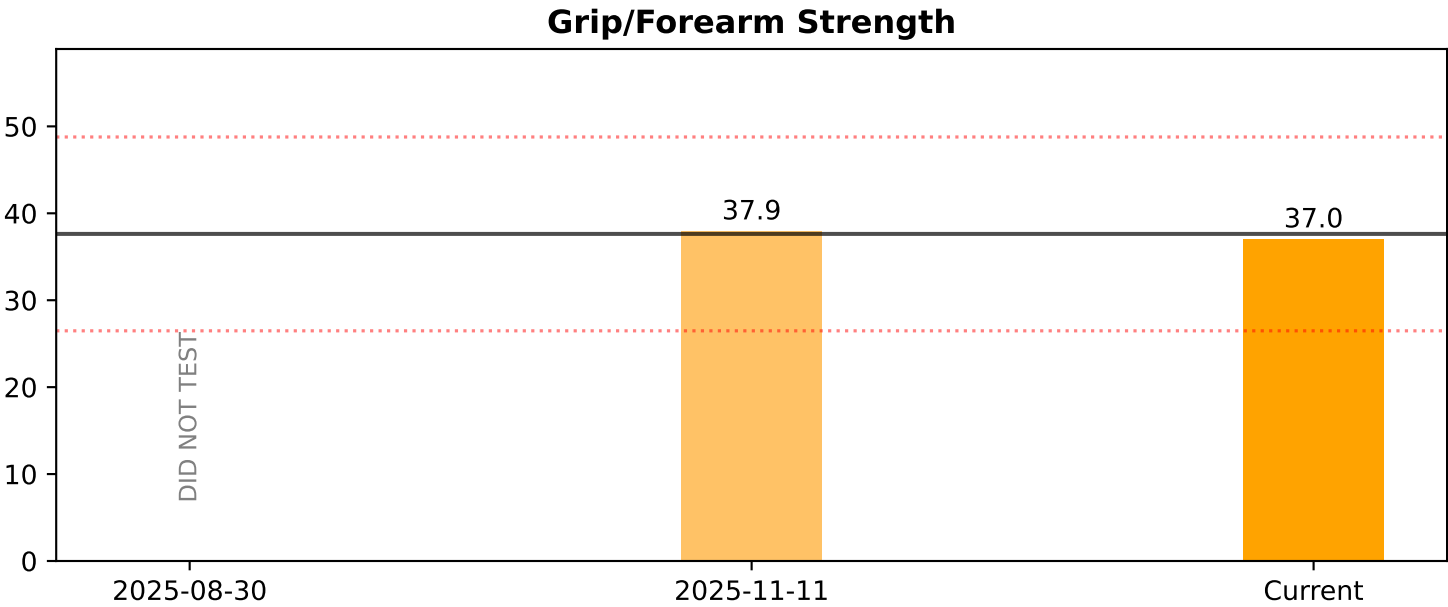

Hip IR Right

Armcare - 74

Shoulder and scapular strength assessment - critical for arm health and injury prevention

Flex Pro Grip Assessment

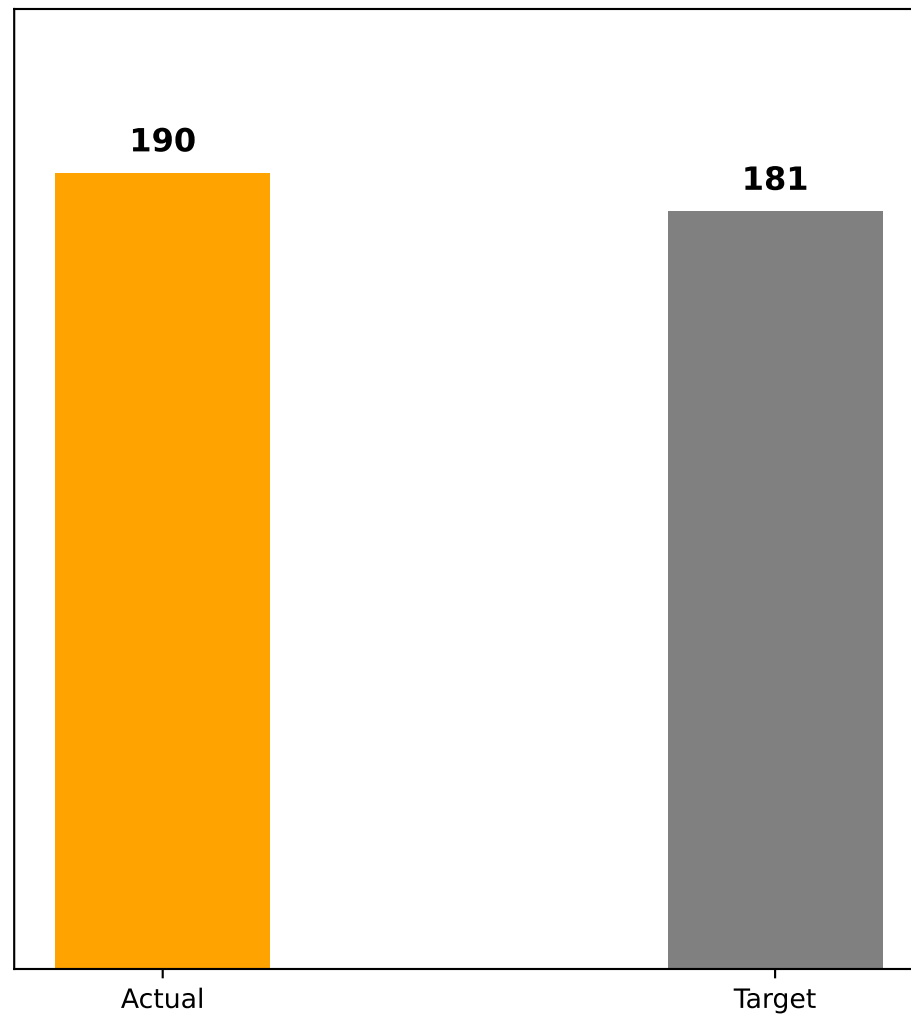

Grip strength and finger / wrist strength assessment - important for bat control and injury prevention

Mocap Velo: 90 mph

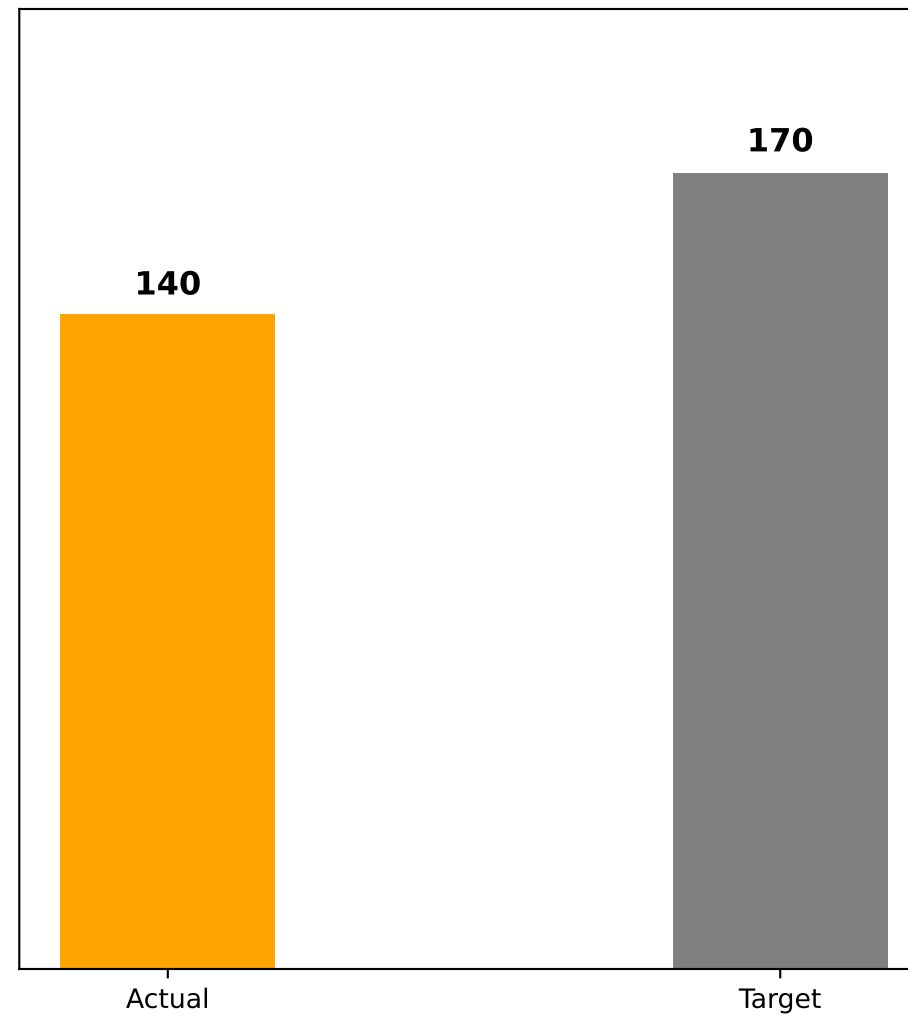

Scored Velo: 91 mph

Score: 5.19

Flexion

Mid Finger

Mid Finger/Flexion Ratio
